### EMC Components

Common mode filters High-speed differential signal line (USB2.0, LVDS, etc.) TCM-M series

# TCM0403M type

### FEATURES

- O Thin-film common mode filter based on the thin-film processing techniques and material technology.
- Has EMC suppression by achieving wide frequency range (cutoff frequency of 4GHz or higher) differential mode transmission while ensuring deep common mode attenuation at high frequencies with virtually no affect on the high-speed differential transmission line signal.
- Lineup includes 0403 (L0.45×W0.30×T0.23mm), the industry's smallest thin-film common mode filter.
- Operating temperature range: –25 to +85°C

#### APPLICATION

Noise countermeasure for high-speed differential interfaces (USB, HDMI, LVDS, MIPI, etc.) for mobile devices and general consumer products such as smart phones, tablets, digital cameras, and portable music players.

O Application guides: Smart phones/tablets

### **REMINDERS FOR USING THESE PRODUCTS**

Before using these products, be sure to request the delivery specifications.

### SAFETY REMINDERS

Please pay sufficient attention to the warnings for safe designing when using this products.

The storage period is within 6 months. Be sure to follow the storage conditions (temperature: 5 to 40°C, humidity: 20 to 70% RH or less). If the storage period elegand, the coldering of the terminal elegandee may deteriorete.						
If the storage period elapses, the soldering of the terminal electrodes may deteriorate.						
	Do not use or store in locations where there are conditions such as gas corrosion (salt, acid, alkali, etc.).					
Before soldering, be sure to preheat components. The preheating temperature should be set so that the temperature difference between the solder temperature and chip temperature does not exceed 150°C.						
Soldering corrections after mounting should be within the range of the conditions determined in the specifications. If overheated, a short circuit, performance deterioration, or lifespan shortening may occur.						
O When embedding a printed circuit board where a chip is mounted to a set, be sure that the overall distortion of the printed circuit board and partial distortion such as at screw tig						
Self heating (temperature increase) occurs when the power is turned ON, so the tolerance should be sufficient for the set thermal design.						
<ul> <li>Carefully lay out the coil for the circuit board design of the non-magnetic shield type.</li> <li>A malfunction may occur due to magnetic interference.</li> </ul>						
$\bigcirc$ Use a wrist band to discharge static electricity in your body through the grounding wire.						
○ Do not expose the products to magnets or magnetic fields.						
○ Do not use for a purpose outside of the contents regulated in the delivery specifications.						
<ul> <li>The products listed on this catalog are intended for use in general electronic equipment (AV equipment, telecommunications equipment, home appliances, amusement equipment, computer equipment, personal equipment, office equipment, measurement equipment, industrial robots) under a normal operation and use condition.</li> <li>The products are not designed or warranted to meet the requirements of the applications listed below, whose performance and/or quality require a more stringent level of safety or reliability, or whose failure, malfunction or trouble could cause serious damage to society, person or property.</li> <li>If you intend to use the products in the applications listed below or if you have special requirements exceeding the range or conditions set forth in the each catalog, please contact us.</li> </ul>
