Title:	M12 Slim Design - color change for multi-seal - PI	

Dear Ladies and Gentlemen,

We would like to inform you about following temporary product deviation.

Due to the global material shortage, especially for the plastic granulate we have to change the color of the multi-seal for the M12 Slim Design temporarily. The basic material is C3U and exact the same we are already using in our current production for the multi-seal. Just the color of the seal is different. All other technical specification and properties remain the same. Hence the change has no influence on the usage, application and handling. We expect that the material C3U in color "blue" can be used in production again with begin of May 2022.

Current version
Material: C3U color blue

New version
Material: C3U color grey

Affected parts - See attached Excel overview

The color change will be phased in with immediate effect. Please take mixed shipments for a short period of time into consideration. If you have further question don't hesitate and ask us.

Best regards,

Matthias Domberg
