1 Overview

Aim of this document is the handling description of the developer’s Evaluation KIT second edition, a laboratory tool named EVK2 in the rest of this document. All given information shall be used as a guide and a starting point for properly developing of your product. Obviously this document cannot embrace all the hardware solutions and products that may be designed.
2 Generality

Telit supplies the EVK2 to assist the designer during his developing project phase to develop his own applications based on Telit modules. The EVK2 provides a fully functional solution for a complete data/phone application. The EVK2 is formed by a motherboard CS1139B and several dedicated Telit modules Interface Boards with RF antenna connectors. The motherboard has multiple power supply possibilities and is equipped with SIM card housing, RS 232 serial port level translator, direct USB1.1 connection, and two audio input/output paths.

The only items you have to provide are:

1) a personal computer or microcontroller;
2) a SIM card with a valid Network subscription;
3) the audio accessories;
4) a knowledge of AT commands programming;
5) a power supply.

The connection between the EVK2 and your PC (or other DTE) are realized by standard RS232 or USB 1.1 ports.

The communications between your application and Telit Modules are realized connecting the Asynchronous Serial Interfaces of the module's Base Band Chips (ASC0 and ASC1) through:

- a double stacked standard DB9 connector, that provides 2 serial communication paths RS232 protocol up to 115Kbit/sec;
- a CMOS HUB, that makes both serial interfaces accessible through one physical connection providing two-way communication in compliance with USB version 1.1 specification up to 1,5Mbytes/sec.

The second one is the only possibility with portable personal computers that generally have not the RS232 port.

Furthermore, the EVK2 allows benefiting of the special features of the new Telit Module versions with PYTHON Script Interpreter and GPS satellite positioning receiver.

The ASC1, accessible as RS232 on lower DB9 connector or through the USB1.1 HUB, is used for:

- continuous of debug messages of the PYTHON Script Interpreter (requires PYTHON version modules);
- continuous direct output of GPS NMEA sentences (geographical coordinates) from modules with GPS.

The development of the applications utilizing Telit modules presents a proper design of all the interfaces towards and from the module (e.g. power supply, audio paths, level translators),
otherwise a decrease in performance will be introduced or, in the worst case, a wrong design can even lead to an operating failure of the module. It is also easily feasible the use of the Telit modules in the so called “stand-alone configuration”, connecting the module mounted on its own interface board directly to your application, through 2x40 pin header connectors.

2.1 Content of the kit

Please check out the content of your EVK2 kit; if any of the items is missing, please contact your supplier.

Table 1

Figure 1: GE863-PY Interface Board (upper) fitted on EVK2 Motherboard (lower).
3 Description

The motherboard CS1139B can be split into several functional blocks depending on the implemented function; the following drawings show a block diagram and the displacement of the main blocks on motherboard.

Figure 2: Miscellaneous signals, connections and routing on CS1139B.
3.1 PCB characteristics

Material: FR4
Thickness: 0.95 mm
Surface finishing: Chemical gold plate Ni 5um/ Au 0.1um

3.2 Mechanical characteristics of the assembled PCBs

3.2.1 Mother Board CS1139B

- Length: 100 mm (max 102.6 mm)
- Width: 160 mm (max 166.10 mm)
- Height: 47.6 mm (included the support with columns)
- Weight: 200 gr (without any interface)
### 3.2.2 GM862 Interface CS1150B

- **Length:** 66,04 mm
- **Width:** 78,74 mm
- **Height:** 21,00 mm
- **Weight:** 27 gr (without the module)

### 3.2.3 GE863 Interface CS1151A

- **Length:** 75 mm (max 84,70 mm)
- **Width:** 78,74 mm
- **Height:** 21,00 mm
- **Weight:** 40 gr (with module)
- **Weight:** 44,3 gr (with module for GPS version)

### 3.2.4 GE864 Interface CS1152B

- **Length:** 66,04 mm (max 75,20 mm)
- **Width:** 78,74 mm
- **Height:** 21,00 mm
- **Weight:** 36 gr (with module)

### 3.2.5 GC864 Interface CS1203B

- **Length:** 66,04 mm
- **Width:** 78,74 mm
- **Height:** 21,00 mm
- **Weight:** 27 gr (without the module)

### 3.2.6 GC864-C2 Interface CS1231X

- **Length:** 50,00 mm
- **Width:** 33,00 mm
- **Height:** 5,60 mm
- **Weight:** 13,8 gr (with module)

### 3.2.7 UC864-CC864 Interface

- **Length:** 102,00 mm
- **Width:** 67,50 mm
- **Height:** 20,80 mm
- **Weight:** 55 gr (without module)

---

**Note:** The overall height for every combination *(mother board+interface board)* is still the height of the mother board.
4 Startup procedure

The motherboard factory setup is:

- Serial port: RS232
- DC source: + (5÷40) V /≥ 1A
- Batt. Charger connector (PL106): On
- RX Amplifier: Audio 1

Respect the following order to use the EVK2:

- ✓ insert your SIM card
- ✓ set properly all jumpers in the desired position
- ✓ plug the module Interface board into PL201 and PL202
- ✓ connect the antenna to RF connector (on module or on Interface Board)
- ✓ connect the audio accessories if required
- ✓ plug the external power supply into the right socket, depending from DC source
- ✓ switch ON the power supply
- ✓ connect the serial cable between your PC and UART (RS232 or USB 1.1)
- ✓ push ON/OFF button for at least 2 seconds until the STATUS LED is on

Your EVK2 should now be operational and ready to receive AT Commands.

4.1 Golden rule

When you use USB port, it is very important to respect the following sequences:

start first turning ON your EVK2 and then connecting it to your PC ;
stop first disconnecting your PC and then turning OFF your EVK2 .
5 Insertion of the Interface Boards

Every *Interface Board* must be inserted on *CS1139B* paying great attention to match the position of the main connectors; this has been made easy:

→ *optically* by a triangle drawn on both printed circuits (except CS1231X);
→ *mechanically* shifting a column out of regular square cross position.

Both guide systems are highlighted by orange color as shown on the next figure.

![Positioning Guide Systems of GM862 Interface Board on CS1139B.](image-url)
6 Power supply setting

The **EVK2** could be powered by different external sources, only one at time. The requested setting is made inserting the proper jumper connectors in the right position as described in the following paragraphs.

Be careful to the connections, even if every supply line is protected by a diode against "polarity reversing" and by a 0Ω resistor against "short circuiting".

6.1 Fixed DC source

Connect a **+3,8V / ≥ 2A** fixed DC source to PL101 respecting the polarization; short pin2 & pin3 - PL104 and pin1&pin2- PL105 by 2 contacts jumper connectors. No other jumpers are needed.

![Figure 5: +3.8V fixed source setting](image)
6.2  Variable DC source

Connect a \((5\pm40) \text{ V} / \geq 1 \text{A}\) variable DC source to PL102 (by wires) or to SO101 (by coaxial plug), with care to the polarities. Short pin1\&pin2-PL104 and pin1\&pin2-PL105 by inserting 2 contacts jumper connectors.

No other jumpers are needed.

![Diagram of Variable DC source setting]

Figure 6: Variable DC source setting

6.2.1 Suggestion

It is useful set the variable DC source at 6V minimum to avoid problems with voltage drops due to the length of the wires or the conductors gauge.
6.2.2 Coaxial Plug
The figure 7 shows the connections of the Power Plug of left part of figure 6.

![Coaxial Power Plug Connection](image)

Figure 7: Coaxial “Power Plug” connection.

6.3 Li-Ion Battery pack and Charger
Connect a Li-Ion battery pack to PL107 with care to the polarity then short pin2&pin3- PL105 by inserting the 2 contacts jumper connector.
If the battery pack needs to be recharged, connect a \(+6V \geq 0.5A\) fixed DC source to PL103, with care to the polarity; short PL106 inserting a 2 contacts jumper connector as shown in figure 8: the yellow CHARGE LED will be on during the initial phase of charge. If you remove the battery pack when the charge stops (no current flows), immediately REMOVE also the jumper of PL106.

![Battery Pack and Battery Charger Connections](image)

Figure 8: Battery Pack and Battery Charger wired connections and setting.

**NEVER CONNECT any Battery charging source to PL103 of CS1139B  WITHOUT the Battery Pack**
6.4 Application Notes

6.4.1 About Li-Ion Battery Pack
The 3.7V Li-Ion rechargeable Battery Pack should be connected directly to PL107 connector. Remember to use the connection cables as short as possible, with the appropriate conductors gauge and the other attributes, such as device power budget and cable flexibility, in order to match the specified voltage drop (especially during the high current absorption periods). To obtain the best performance we suggest a capacity of 1000 mAh (not lower than 500 mAh).

6.4.2 About Current Charger
With a +6V Current Unlimited Source connected to PL103 connector, the battery pack will be directly charged through VBATT connector pins of the Telit Modules, under control of the Internal Charge Algorithm. Depending on the size, the Li-Ion cell manufacturers suggest a charge current value not greater than 1.5C\(^1\); even if a lower current means a longer charging time, a current equal to 0.5C is considered to be a good choice.

With reference to the schematic diagram 30276SE11139A -sheet1, the Current Limiting Circuit (Q102, Q103, R106, R107, R108, R109, R110, R111, R112, R113, C105) sets the maximum value of the Charge Current in respect to the law:

\[ I_{ch} = \frac{V_{be} Q102}{R_{par}} \rightarrow \text{where } R_{par} = \frac{1}{1/R110 + R111 + R112 + R113} \]

With the default values, the charge current will be ~ 470mA, which will charge Battery Packs with a capacity from 350mAh to 1000mAh, without any dissipation problem.

If a higher capacity Battery Pack is needed, you must increment the Time Out in the Telit Modules.

---

\(^{1}\) Capacity of the battery pack, expressed in mAh
7 Serial interface

The following figure shows the architecture of the serial ports.

Figure 9: Serial ports block diagram.
7.1 Serial Port Setup

Communications between your application and the Telit modules are allowed connecting the DTE to the Asynchronous Serial Interfaces of Base-Band Chip, ASC0 and ASC1, through the stacked standard RS232 communications port (double 9way D-socket connector at slow data rates of RS232 protocol) or a standard USB-B Series receptacle (at higher data rates of USB1.1 specification through a CMOS HUB that realizes a multiple attachment point device).

![Double 9way D-Socket Connector](image)

The selection is made short circuiting PL302&PL303 (RS232 mode) or PL302&PL301 (USB 1.1 mode) by 10 pieces of 2 contacts jumpers. This solution has been implemented because you can isolate every single line during the development.

![Serial Ports selection](image)
8 Audio Section

8.1 Overview

The BaseBand chip of our modules provides two audio paths both in receive and in transmit sections, which could be active only one at a time.

To turn on your well-suited section on EVK2, please refer to “AF Amplifiers Setting” paragraph and followings.

To know which are the suggested performances of the EVK2 audio transducers, refer to “Audio Accessories” paragraph.

8.1.1 History

The Baseband chip of our modules was developed for the cellular phones, which needed two separated amplifiers both in RX and in TX section. A couple of amplifiers had to be used with internal audio transducers (Handset mode, HS) while the other couple of amplifiers must be used with external audio transducers (Handsfree mode, HF).

8.1.1.1 Transducers definitions

**Headsets** are transducers that receive an electrical signal from a receiver and use speakers placed in close proximity to the ears to convert the signal into audible sound waves.

In the context of telecommunication, the word *Headset* is also commonly understood to refer to a combination of *Headphone* and Microphone used for two-way communication, like with a mobile phone.

**Earphones** are small Headphones that are placed directly outside of the ear canal, but without fully enveloping it. They are generally inexpensive and are favored for their portability and convenience.

**Earpiece**

A part whether of a telephone receiver or hearing aid, that fits in or is held next to the ear.

8.1.2 Actual

The HS and HF definitions have been kept in the Software and on the schematics of the Telit modules. But with EVK2 we will refer to Audio1 or Audio2 section instead of Handset and Handsfree respectively, remembering that:

- they can have fully equivalent electrical performances (*like the two microphone amplifiers*)
- they can activate the same functionalities (*like the Echo Canceller module*)
- they can offer slightly different performances (*like the two speaker buffering stages*)
8.1.3 The choice
The activation of the audio path is made Hardware by AXE line or Software by AT#CAP command. If you don’t have any load driving constraint (like a speaker with an impedance coil lower than 16Ω), the choice between one or other “block” could be done without consideration related to the electrical performances; for example in order to overcome the PCB design difficulties.

8.2 Differential and Single Ended

8.2.1 Concepts
Any voltage can be characterized by a potential difference between two terminals. The configuration of the two terminals and how the signal is delivered from output to input allows the signal to be more generally described in one of three ways:

- **Single-ended signal.** This is a signal delivered between a signal trace and a ground. One terminal for a single-ended connection is always at fixed potential (usually Ground).
- **Differential Signals.** These are signals that travel through a pair of traces. On the signal pair, neither of the terminals is Ground.
- **Common mode Signals.** They represent a special case of differential signals, also traveling between a pair of traces, where the voltage potential on both signals is the same.

8.2.2 Benefits and disadvantages
Differential amplifiers are desirable to use, especially in audio applications where signal levels are very low such as those from microphones. Classically, the benefits obtained from differential amplification are:

- **Increase of Common Mode Rejection Ratio (CMRR)**
  Differential inputs enable cancellation of any noise common on both inputs. Noise generated at the input of the amplifier has a greater effect than noise generated at the output, because any noise on the input is multiplied by the gain of the amplifier.

- **Increase Signal to Noise Ratio (SNR)**
  The inputs to the amplifier are especially sensitive to noise because they are typically not driven by a very low impedance source.

- **High Rejection in Electromagnetic Interference (EMI)**
  Noise immunity is very important in wireless phones because the RF signal is sent in bursts such that the frequency between bursts is in the audio band. RF rectification is such a problem that many manufacturers shield the audio portion of the phone.

- **Double Useful signals level**
  The signal levels from microphone and the voltage swing to the load are doubled. Then the AF power to the load it is 4 times the single-ended AFpower at the same voltage supply.
- **No output blocking capacitor is needed**
  Even if the differential outputs are biased at half-supply; no DC voltage exists across the load. You do not need the big, expensive and heavy blocking capacitors (generally from 33 µF to 1000 µF), lowering the cost and saving PCB space.
  There is no frequency limiting effect due to the high pass filter network created with the speaker impedance and the coupling capacitance.

- **Less shielding is required from amplifier to load**

Mainly we have only one disadvantage using differential amplification: the routing of one more signal line could be more difficult and the additional trace requires more board space.

### 8.2.3 Settings

Connecting your accessories to SO401 in/out connector, you will implement Single Ended Input/Output configurations. Removing all 2 contacts jumpers inserted between PL402&PL403 or PL403&PL404, the in/out lines of our modules will be directly available on PL402 and PL404 connectors. In such a way, you will be able to implement fully Differential Input/Output configurations. Only with GC864-QUAD/PY-C2 modules the Ear output lines are AC coupled.

![Figure 12: PL402 and PL404 Fully Differential audio lines.](image-url)
9 AF Amplifiers Setting

The Base Band Processor Audio Amplifiers selection is made short-circuiting PL403&PL402 (RX Amplifier 1) or PL403&PL404 (RX Amplifier 2). In such a way you could verify the complete performance of both audio paths.

Figure 13: BaseBand Audio Amplifiers selection
10 Audio outputs

The EVK2 output audio signals could be drive a device connected to SO401 (LOW AF POWER mode) or to PL401 (HIGH AF POWER mode).

10.1 Low AF Power Mode

Inserting the 2 contacts jumpers as explained at paragraph 9A, a standard off-the-shelf Headset should be connected to the SO401 (3 contacts, 2.5mm diameter jack connector).

With such an insertion, the Telit Modules will power the Microphone through a Single Ended input circuit and the Earpiece through a Single Ended/AC coupled output circuit.

Note that the acoustic performance of the Headset (frequency response, loudness) largely depends by its housing, fitting and acoustic impedance.

REMINDER: the coil impedance of the Headset should be higher than 15Ω@1KHz

Figure 14: Headset insertion
10.1.1 Audio connector

![Audio Plug Pin-out](image)

Figure 15: Audio Plug Pin-out

10.2 High AF Power Mode

Connecting an 8Ω Speaker to PL401 by a 2 contacts female connector, you could drive it through the 500mW Power Amplifier. In this case the Speaker will be driven in fully differential configuration, with no side connected to ground and without any output coupling capacitor. Therefore care must be taken because there is DC voltage on both sides of the Speaker.

The overall gain of this amplifier can be modified varying the ratios R406/R404 and R407/R410:

$$ A_v = 2 \cdot \frac{R404}{R406} = 2 \cdot \frac{R407}{R410} \quad \text{if} \quad R404=R407 \text{ and } R406=R410 $$

**REMINDER: the coil impedance of the Speaker should be higher than 8Ω@1KHz**
10.2.1 Speaker and Stand-alone Microphone

If you are using a Speaker, you can connect a stand-alone electret microphone by a coaxial 2,5mm plug to SO401, respecting the following pin-out.

1= MIC +
2= N.C.
3= MIC -

Figure 17: Electret Microphone Plug Connection

Figure 18: Speaker & Electret Microphone case insertion
10.2.2 Speaker plus Headset

If you have chosen to connect the Speaker to HIGH AF POWER output, without having a stand-alone electret microphone, it is also possible to connect a standard off-the-shelf Headset to SO401 without any problem, as shown in the figure 18: the AF output signal will be heard on both Speaker and Earpiece.

![Figure 19: Speaker plus Headset insertion](image)

10.3 Warning

10.3.1 Coil impedance
You must use the right coil impedance depending from audio output you want to use.

10.3.2 Earpiece
If you sort out the LOW AF POWER solution connecting your Headset to SO401, the coil impedance must be at least 16Ω@1KHz or higher.

10.3.3 Speaker
If you sort out the HIGH AF POWER solution connecting your Speaker to PL401, the coil impedance must be at least 8Ω@1KHz or higher.
11 Audio Accessories

The following tables show the suggested specification to obtain the best performance from off-the-shelf accessories.

### 11.1 Headset

</tr>
</tbody>
</table>

Table 7: CHARGE LED indications

Figure 21: CHARGE LED position
12.2 Switches

You turn On/Off or Reset the EVK2 by 2 push buttons.

12.2.1 POWER ON Switch

Pressing for at least 2 seconds the Power ON SWITCH, you turn On/Off the whole EVK2 and the Telit module in use: the STAT_LED starts to slowly blink (ON state) or stops to blink (OFF state).

12.2.2 RESET Switch

Whenever the RESET SWITCH is pressed, you could reset the Telit module in use. When the device is reset, it stops any operation without doing any detach operation from the network where it is registered and it reboots after the release of the Reset Switch. This behavior is not a proper shut down because any GSM device is requested to issue a detach request at turning off. For this reason the Reset pressing action must not be used to normally reboot/shutting down the device, but only as an emergency exit in the rare case the device remains stuck waiting for some network response. The RESET is internally controlled at start-up to achieve always a proper power-on reset sequence, so there is no need to control this pin on start-up. It may only be used to reset a device already on that is not responding to any command.

Figure 22: SWITCHES position
13 Connectors pinout

13.1 Motherboard to Module

The connections between CS1139B and every Telit module Interface Board are made through 2x 40 contacts male connectors. Theirs pin functions are listed in the following tables.

Table 9: PL202-CS1139B
14 Module Interface Boards

14.1 Generality

You can use your EVK2 with GM862/GE863/GE864/GC864/GC864-C2 Telit modules fitted on its own Interface Board; all connections are made through 2x40 contacts connectors. It's possible to use these Interface Boards also in stand-alone mode, inserting the “not mounted” components (related to RESET BUTTON, ON BUTTON, SIM HOLDER and STATUS LED functions) plus the use of an external level translator circuit.

14.2 Short Description

Interface boards convert the module connection technology (board-to-board or BGA soldering) into a PTH pin connector. The part of the basic interfaces is served by the motherboard, whereas specific interfaces according to the type of the module (antenna, general purpose inputs/outputs GPIO, ADC/DAC, UART) are available on the adapter board to connect it to the user applications, extension boards, measurements equipment or other tools.

Table 11. GPS versions further accessories.
15 GM862 Interface

This board allows easily interfacing the module with the EVK2 and testing its functionalities; any version of GM862 can be inserted. No settings are needed.

Figure 23. GM862 Interface Board

15.1 Stand-alone setup

If you need to use the interface out of EVK2 (Stand-alone setup) you have to mount the following missing components:

- the RESET Button
- the ON Button;
- the STATUS LED and its load resistance.
15.2 Interface connectors

The following connectors are available:

- 2 male connectors (30 pins each one: PL102, PL103), on which it is possible to connect external devices like user's application, Telit extension boards, measurements equipment or other tools
- 2 female connectors (40 pins each one: SO101, SO102), to connect the interface to the EVK2 mother board circuits (power supply lines, serial in/out lines, audio in/out lines).

15.3 Content of the kit

Please check out the contents of your interface kit; if any of the items is missing, please contact your supplier.

Table 12.
16 GE863 Interface

This board allows easily interfacing the module with the EVK2 and testing its functionalities; any version of GE863 can be soldered on it. Depending by the version a different module version is needed, and some components have to be mounted (GE863-GPS) or not (GE863-PY/QUAD, GE863-SIM).

16.1 Stand-alone setup

If you need to use the interface out of EVK2 (Stand-alone setup) you have to mount also:

- the SIMCARD Holder;
- the RESET Button
- the ON Button;
- the STATUS LED and its load resistance.
16.2 Content of the kits

Please check out the contents of your interface kit; if any of the items is missing, please contact your supplier.

Table 15

16.3 Interface connectors

The following connectors are available in any version:

- GSM RF connector (*SMA Female*)
- 2 male connectors (4 pins each one: PL101, PL102) to select the Serial port configuration
- 2 female connectors (*40 pins each one: SO101, SO106*) to connect the interface to the EVK2 mother board circuits (*power supply lines, serial in/out lines, audio in/out lines*)
- 2 male connectors (*30 pins each one: PL103, PL104*), on which it is possible to connect external devices like user’s application, Telit extension boards, measurements equipment or other tools
16.4 Additional components for GPS version

The following components are available only in GPS version (P/N 3990250671):

- GPS RF connector (SMA Female)
- USB B-type connector and its circuitry (see schematic 30276SE11151A)

![Connectors displacement on GE863-GPS](image-url)
16.5 USB connector

The USB interface provides 2 serial ports that are related to the NMEA serial port and SIRF-Binary serial port of GE863-GPS module. It is possible to select if the SIRF Binary serial port will be available on the USB connector or directly connected to the second serial port of the modem (CONTROLLED MODE). For setting refer to paragraphs 16.7.1, 16.7.2.1, 16.7.2.2.

Figure 26: GE863-GPS Serial ports block diagram
16.6  Serial port configuration

To switch the serial lines you must short-circuit the PL101-PL102 connectors by 2 contacts jumpers.

16.6.1 GE863-PY/QUAD

The 2 contacts jumpers have to be fitted between pin1 & pin2 of PL101-PL102 connectors. This carries out the *Python Debug Port* on Trace Port of EVK2.

![Figure 27: Jumpers setting for GE863-PY/QUAD](image)

16.6.2 GE863 - GPS

The 2 contacts jumpers have to be fitted between pin2 & pin3 or pin3 & pin4 of PL101-PL102 connectors.

16.6.2.1 “CONTROLLED MODE”

This set the *SIRF Binary* to serial port of the modem. (*Typical application Design*)

![Figure 28: Jumpers setting for SIRF BINARY port connected to MODEM port 2](image)

**NOTE.** All *AT GPS commands* are available in this configuration.
16.6.2.2 “SEPARATED SERIAL PORT”

This set the *SIRF Binary* available on the USB connector.

![Diagram](image)

Figure 29: Jumpers setting for SIRF BINARY port available on USB connector

**NOTE.** In this configuration some *AT GPS commands* are not available. Refer to *AT Commands Reference User Guide*

16.7 ANTENNA connectors

16.7.1 GPS ANTENNA connector

An active GPS antenna should be connected to SO104; the GPS section provides the DC feeding.

**WARNING:** don’t connect a *GSM* antenna on this connector.

16.7.2 GSM ANTENNA connector

A GSM antenna should be connected to SO103.

16.7.3 RFU ANTENNA connector

On PCB there is the mounting possibility of a further RF connector (*SO105*): it is related to future implementation.
17 GE864 Interface

This board allows easily interfacing the module with the EVK2 and testing its functionalities; any version of GE864 can be soldered on it. No settings are needed.

17.1 Stand-alone setup

If you need to use the interface out of EVK2 (Stand-alone setup) you have to mount the following missing components:

- the SIMCARD Holder;
- the RESET Button
- the ON Button;
- the STATUS LED and its load resistance.
17.2 Interface connectors

The following connectors are available:

- 2 male connectors (30 PTH pins each one: PL102, PL103), by which it is possible to connect external devices, user’s application, Telit extension boards, measurements equipment or other tools;
- 2 female connectors (40 PTH pins each one: SO101, SO102), to connect the interface to the EVK2 mother board circuits (power supply lines, serial in/out lines, audio in/out lines);

17.3 Content of the kit

Please check out the contents of your interface kit; if any of the items is missing, please contact your supplier.

This board allows easily interfacing the module with the EVK2 and testing its functionalities; any version of GC864 can be inserted. No settings are needed.

Figure 31. GC864 Interface Board

18.1 Stand-alone setup

If you need to use the interface out of EVK2 (Stand-alone setup) you have to mount also:

- the SIMCARD Holder;
- the RESET Button
- the ON Button;
- the STATUS LED and its load resistance.
18.2 Interface connectors

The following connectors are available:

- 2 male connectors (30 PTH pins each one: PL102, PL103), by which it is possible to connect external devices, user’s application, Telit extension boards, measurements equipment or other tools.
- 2 female connectors (40 PTH pins each one: SO101, SO102), to connect the interface to the EVK2 mother board circuits (power supply lines, serial in/out lines, audio in/out lines).

19 GC864-C2 family Interface

This board allows easily interfacing the module with the EVK2 and testing its functionalities; any version of GC864-C2 can be inserted. No settings are needed.

19.1 Stand-alone setup

If you need to use the interface out of EVK2 (Stand-alone setup) you have to mount the following missing components:

- the SIMCARD Holder;
- the ON Button;
- the STATUS LED and its load resistance.
19.2 Interface connectors

The following connectors are available:

- 2 male connectors \((30\text{ PTH pins each one: PL101, PL102})\), by which it is possible to connect external devices, user’s application, Telit extension boards, measurements equipment or other tools;
- 2 female connectors \((40\text{ PTH pins each one: SO101, SO104})\), to connect the interface to the EVK2 mother board circuits \((\text{power supply lines, serial in/out lines, audio in/out lines})\);

19.3 Content of the kit

Please check out the contents of your interface kit; if any of the items is missing, please contact your supplier.

Table 18
20 UC864 family Interface

This board allows easily interfacing the module with the EVK2 and testing its functionalities; any version of UC864 can be inserted. For more information please refer to 1vv0300771 UC864-E Interface User Guide. No settings are needed.
21 GPIO ports

A certain number of GPIO ports (General Purpose Input/Output) are available on every Telit Module Interface Board, giving you the possibility to drive digital devices and report their own status. Some of these ports are dedicated. Refer to Telit Product Specification to have all information about characteristics of every GPIO port.

You can consult the following paragraphs to see the displacement of GPIO on every Interface Board.
21.1 GPIO location

21.1.1 GM862 Interface (p/n 3990250670)

There are 13 GPIO ports available on PL102 and PL103
(Refer to schematic diagram 30276SE11150B)

Figure 34: Position of GPIO ports on GM862 interface
21.1.1.1 Note on GM862-GPS version

If you use this interface in conjunction with GM862-GPS version *be careful* that the following two pins of SO101 connector assume different functions, and precisely:

- Pin 2 = TX_GPS
- Pin 3 = RX_GPS
21.1.2 GE863-GPS Interface (p/n 3990250671)

There are 18 GPIO ports available on PL103 and PL104
(Refer to schematic diagram 30276SE11151A)

Figure 35: Position of GPIO ports on GE863-GPS interface
21.1.2.1  Note on p/n 3990250684 and p/n 3990250685 GE863
(Refer to schematic diagrams 30276SE11151A-C, 30276SE11151A-D)

If you use these interfaces the following two pins of PL104 connector assume different functions, and precisely:

Pin 20  = ADC_IN2
Pin 21  = ADC_IN3
Pin 26  = N.C
21.1.3 GE863 Interfaces (p/n 3990250684 -3990250685-3990250703)

There are 18 GPIO ports available on PL103 and PL104

Refer to schematic diagrams

30276SE11151A-C
30276SE11151A-D
30276SE11151A-G

Figure 36: Position of GPIO ports on GE863 interfaces
21.1.4 GE864 Interface (p/n 3990250672)

There are 22 GPIO ports available on PL101 and PL102
(Refer to schematic diagram 30276SE1152B)

Figure 37: Position of GPIO ports on GE864 interface
21.1.5 GC864 Interface (p/n 3990250680)

There are 23 GPIO ports available on PL101 and PL102.

(Refer to schematic diagram 30276SE111203B)

Figure 38. Position of GPIO ports on GC864 interface
21.1.6 GC864-C2 Interface (p/n 3990250683)

There are 6 GPIO ports available on PL101 and PL102
(Refer to schematic diagram 30276SE11231X)

Figure 39. Position of GPIO ports on GC864-C2 interface
21.1.7 UC864 Interface (p/n 4990150470)

There are 22 GPIO ports available on PL101 and PL102.

22 SCHEMATICS

In the following paragraphs the user can find the schematics related to all EVK2 boards, therefore to the Mother Board, to the Interface Boards and to the Extension Boards.
22.1 EVK2 Mother Board
22.2 GM862 Interface Board
22.3 GE863 Interface Board
This sheet is related only to GPS version
22.4 GE864 Interface board
22.5 GC864 Interface board
22.6 GC864-C2 Interface board
22.7 UC864 Interface board
23 Service and firmware update

You can update the Telit Module firmware through the serial cables (RS232 or USB 1.1) used for the communication with a PC. The firmware update can be done with a specific software tool provided by Telit that runs on windows based PCs.

All levels are conformed to RS232 and V.24 standard and a PC serial port can be directly connected to this connector.
24 SAFETY RECOMMENDATIONS

READ CAREFULLY

Be sure the use of this product is allowed in the country and in the environment required. The use of this product may be dangerous and has to be avoided in the following areas:

- Where it can interfere with other electronic devices in environments such as hospitals, airports, aircrafts, etc
- Where there is risk of explosion such as gasoline stations, oil refineries, etc

It is responsibility of the user to enforce the country regulation and the specific environment regulation.

Do not disassemble the product; any mark of tampering will compromise the warranty validity.

We recommend following the instructions of the hardware user guides for a correct wiring of the product. The product has to be supplied with a stabilized voltage source and the wiring has to be conforming to the security and fire prevention regulations.

The product has to be handled with care, avoiding any contact with the pins because electrostatic discharges may damage the product itself. Same cautions have to be taken for the SIM, checking carefully the instruction for its use. Do not insert or remove the SIM when the product is in power saving mode.

The system integrator is responsible of the functioning of the final product; therefore, care has to be taken to the external components of the module, as well as of any project or installation issue, because the risk of disturbing the GSM network or external devices or having impact on the security. Should there be any doubt, please refer to the technical documentation and the regulations in force.

Every module has to be equipped with a proper antenna with specific characteristics. The antenna has to be installed with care in order to avoid any interference with other electronic devices and has to guarantee a minimum distance from the people (20 cm). In case of this requirement cannot be satisfied, the system integrator has to assess the final product against the SAR regulation.

The European Community provides some Directives for the electronic equipments introduced on the market. All the relevant information's are available on the European Community website: http://europa.eu.int/comm/enterprise/rtte/dir99-5.htm

The text of the Directive 99/05 regarding telecommunication equipments is available, while the applicable Directives (Low Voltage and EMC) are available at: http://europa.eu.int/comm/enterprise/electr_equipment/index_en.htm
24.1 Disposal of this product in the European Union

According to the directives 2002/95/CE, 2002/96/CE and 2003/108/CE, which have been transposed in Italian Legislative Decree of July 25, 2005, n. 151, Telit Communications S.p.A informs that:

- The symbol of the crossed-out wheeled bin reproduced on the product or on the packaging, indicates that the product, at the end of life cycle, must be gathered separately from the other waste.

- The separate collection of rubbish for this product at the end of its life cycle is arranged and managed by the manufacturer. The user, who wants to dispose the product, must contact the manufacturer and follow the available system that allows the separate collection of rubbish for this product that has reached the end of the life cycle.

- The suitable separate collection of rubbish, necessary for the subsequent transfer of the obsolete product for the recycling, the treatment and the compatible environment disposal, contributes to avoid possible negative effects to the environment and the health, and helps in the re-use and/or recycle of the materials from which this product is composed.

- The illegitimate disposal of the product by the holder implies the enforcement of the administrative penalties provided for the regulations in force.

- The company is enrolled on the register of the manufacturers of Electric and Electronic Equipment (EEE) of the Italian Minister for the Environment with the number: IT08020000002357

26 Disposal of old Electrical & Electronic Equipment (WEEE Mark)

This symbol, applied on our products and/or on its packaging, indicates that this product should not be treated as household waste when you wish to dispose of it. Instead, it should be handed over to an applicable collection point for the recycling of electrical and electronic equipment. By ensuring this product is disposed of correctly, you will help prevent potential negative consequences to the environment and human health, which could otherwise be caused by inappropriate disposal of this product. The recycling of materials will help to conserve natural resources. For more detailed information about the recycling of this product, please contact your local city office, household waste disposal service or the retail store where you purchased this product.
27 Technical Support

Telit Communications S.p.A. technical support to **EVK2** customer is included into official Website **www.telit.com**, which contains also all available technical documentation to download.

| Rev.6 | 24/05/2007 | Pag. 2  Product Table updated
                                   Pag. 10 Table 1 updated
                                   Pag.24 Modified the formula
                                   Pag.22 Inserted the Audio Section chapter
                                   Pag.39 Table 10 modified
                                   PCB release updating
                                   Erased all Dual Camera paragraph
                                   Figures and table updated
                                   Paragraph 15.3  16.2  17.3  18.3  19.3  inserted
                                   24.1 EVK2 SYS p/n 3990150463: added RoHS certification
                                   24.9 GE864-QUAD Interface p/n 3990250688: added RoHS certification
                                   24.11 GE864-QUAD-C2 Interface p/n 3990250683: added RoHS certification |
| Rev.7 | 22/01/2008 | Pag. 2  Product Table updated with UC864-E and GE863-SIM
                                   Pag.7  Disclaimer Date modified
                                   Pag.13 Inserted UC864 Interface dimensions
                                   Pag.36 Inserted refer to GE863-SIM
                                   Pag.38 Table 10 Inserted UC864 and GE863-SIM Interface Code
                                   Pag.38  Order Code Table updated
                                   Pag.42 Added figure 24 with GE863-SIM photo
                                   Pag.43 Added GE863-SIM version kit list
                                   Pag.54 Inserted UC864 Interface photo
                                   Pag.64 Inserted figure 40 and Table 17 of UC864 GPIO positioning
                                   Pag.77-78 Inserted UC864 Interface Schematic diagrams
                                   Removed notes regarding interface board of phased out models from the GE863 family (Please refer to the previous version of this document if you need information for the interfaces with the following P/N: 3990250669 & 3990250677) |
| Rev.8 | 20/03/2008 | Pag.64 Updated 40 and Table 19 of UC864 GPIO positioning
                                   Pag.66-70 Updated EVK mother board schematics
                                   Pag.91 Added new European WEEE directive |
| Rev9  | 28/05/2008 | Pag.77-78 Replaced UC864 Interface board schematics with more readable drawings. |
