Notification Text:

SYST-19BVSK770

Microchip has released a new Datasheet for the 1.5A High-Speed 30V MOSFET Drivers Data Sheet of devices. If you are using one of these devices please read the document located at [1.5A High-Speed 30V MOSFET Drivers Data Sheet](#).

Notification Status: Final

Description of Change: • Added AEC-Q100 Automotive Qualification to Features, General Description and examples in Product Identification System.

- Updated Section 5.0 "Packaging Information".
- Made minor formatting changes throughout the document.

Impacts to Data Sheet: See above details.

Reason for Change: To Improve Productivity

Change Implementation Status: Complete

Date Document Changes Effective: 21 Dec 2022

NOTE: Please be advised that this is a change to the document only the product has not been changed.

Markings to Distinguish Revised from Unrevised Devices: N/A

1.5A High-Speed 30V MOSFET Drivers

Features

- Passes AEC-Q100 Automotive Reliability Testing
- High-Peak Output Current: 1.5A
- Wide Input Supply Operating Range:
 - 4.5V to 30V
- High Capacitive Load Drive Capability:
 - 1000 pF in 25 ns
- Short Delay Time: <78 ns (Typical)
- Low Supply Current:
 - With Logic '1' Input: 2.5 mA
 - With Logic '0' Input: 300 μ A
- Low Output Impedance: 7 Ω
- Latch-Up Protected: Will Withstand >300 mA Reverse Current
- Electrostatic Discharge (ESD) Protected: 4 kV

Applications

- Small Motor Drive
- Power MOSFET Driver
- Driving Bipolar Transistors

General Description

The TC4431/TC4432 are 30V CMOS buffers/drivers suitable for use in high-side driver applications. They do not latch up under any conditions within their power and voltage ratings. They can accept, without damage or logic upset, up to 300 mA of reverse current (of either polarity) being forced back into their outputs. All terminals are fully protected against electrostatic discharge up to 4 kV.

Undervoltage Lockout (UVLO) circuitry forces the output to a low state when the input supply voltage drops below 7V. For operation at lower voltages, disable the lockout and start-up circuit by grounding pin 3 ($\overline{\text{LOCK DIS}}$); for all other situations, pin 3 ($\overline{\text{LOCK DIS}}$) should be left floating. The undervoltage lockout and start-up circuit gives brown out protection when driving MOSFETs.

The TC4431 and TC4432 are AEC-Q100 qualified for automotive applications.

1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings†

Supply Voltage	36V
Input Voltage (Note 1)	$V_{DD} + 0.3V$ to GND
Package Power Dissipation ($T_A \leq 70^\circ\text{C}$)	
PDIP	730 mW
CERDIP	800 mW
SOIC	470 mW
Maximum Junction Temperature (T_J)	+150°C
Storage Temperature Range	-65°C to +150°C

† **Notice:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions above those indicated in the operation sections of the specification is not intended. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

2.0 TYPICAL PERFORMANCE CURVES

Note: The graphs and tables provided following this note are a statistical summary based on a limited number of samples and are provided for informational purposes only. The performance characteristics listed herein are not tested or guaranteed. In some graphs or tables, the data presented may be outside the specified operating range (e.g., outside specified power supply range) and therefore outside the warranted range.

Note: Unless otherwise indicated, $T_A = +25^\circ\text{C}$ with $4.5\text{V} \leq V_{DD} \leq 30\text{V}$.

3.0 PIN DESCRIPTIONS

The descriptions of the pins are listed in [Table 3-1](#).

TABLE 3-1: Pin Function Table

Pin No.	Symbol	Description
1	V_{DD}	Supply Input, 4.5V to 30V
2	IN	TTL/CMOS Compatible Input
3	$\overline{\text{LOCK DIS}}$	Input Pin, Enable/Disable for UVLO
4	GND	Ground
5	GND	Ground
6	OUT	Drive Output, Pull Down
7	OUT	Drive Output, Pull Up
8	V_{DD}	Supply Input, 4.5V to 30V

3.1 Supply Input (V_{DD})

The V_{DD} input is the bias supply input for the MOSFET driver and is rated for 4.5V to 30V with respect to the ground pins. The V_{DD} input should be bypassed to ground with a local ceramic capacitor. The value of this capacitor should be chosen based on the capacitive load that is being driven.

3.2 Control Input (IN)

The MOSFET driver input is a TTL/CMOS compatible input with 250 mV of hysteresis between the high and low threshold voltages. If an input signal level of greater than 12V is applied to the device, a series current limiting resistor is recommended.

3.3 Lockout Disable ($\overline{\text{LOCK DIS}}$)

The lockout pin enables/disables the undervoltage lockout feature of the device. If undervoltage lockout is desired (output is not enabled until the bias voltage reaches 8.4V (typical) on the rising edge and is disabled when the bias voltage reaches 7.7V (typical) on the falling edge), the lockout pin should be left floating. If operation below 7V is desired, the lockout pin should be tied to ground.

3.4 Ground (GND)

The ground pins are the return path for the bias current and for the high-peak currents which discharge the load capacitor. Both ground pins should be used to ensure proper operation. The ground pins should be tied into a ground plane or have short traces to the bias supply source return.

3.5 Drive Output (OUT)

The TC4431/TC4432 devices have individual source and sink output pins. This feature can be used to adjust the rise and fall time independently by adding separate charge and discharge resistors external to the device. Pin 7 (source output) can source 3A peak currents into capacitive loads and pin 6 (sink output) can sink 1.5A peak currents from a capacitive load.

APPENDIX A: REVISION HISTORY

Revision E (December 2022)

The following is the list of modifications:

- Added AEC-Q100 Automotive Qualification to [Features](#), [General Description](#) and examples in [Product Identification System](#).
- Updated [Section 5.0 “Packaging Information”](#).
- Made minor formatting changes throughout the document.

Revision D (December 2007)

The following is the list of modifications:

- [Section 1.0 “Electrical Characteristics”](#): Added V temperature information to Temperature Characteristics table.
- Added Revision History.
- Added V temperature range to Product identification System page.

Revision C (May 2003)

- Undocumented changes.

Revision B (May 2002)

- Undocumented changes.

Revision A (April 2002)

- Original Release of this Document.
