Stainless Steel Drinking Cup

The stainless steel drinking cup is a replacement for static generating foam, plastic cups or bottles on the workstation. It protects static sensitive components on the workstation from preventable ESD events by removing charges to ground when picked up by a grounded operator or placed on a grounded surface.

- **NEW** Screw-on lid with flip opening
- Constructed with double wall Stainless Steel interior and exterior
- Thermal insulated cup holds up to 16 oz. of hot or cold drinks
- BPA and toxin free
- Clearly printed with ESD Protective Symbol
- Custom imprinting available - 100 piece minimum order
