

EV28310-C-00A

Ultra-Low I_Q Step-Down Regulator with LDO Step-Down Switcher Evaluation Board

DESCRIPTION

The EV28310-C-00A is an evaluation board designed to demonstrate the capabilities of the MP28310, a monolithic power management unit containing a 300mA, high-efficiency, step-down switching converter and a 100mA LDO regulator. The sub-mA quiescent current provides extremely high efficiency when the load current is low (down to a μA range). With a maximum 5.5V input range, the MP28310 is ideal for use in battery-powered devices.

Constant-on-time (COT) control provides fast transient response, high light-load efficiency, and allows for minimal capacitors.

Another 100mA LDO regulator provides easy system configuration with a low LDO output voltage ripple.

The MP28310 is available in a small CSP-12 (1.2mmx1.6mm) package.

QUICK START GUIDE

The output voltage of this board is set using the CTRL pins (see Table 1). If the switcher pulls high, the relative CTRL pin connects to VIN. If the switcher pulls low, the CTRL pin connects to GND.

Table 1: CTRL vs. Output Voltages ⁽²⁾

For Step-Down Switcher			
CTRL3	CTRL2	CTRL1	OUT1
0	0	0	Disabled
0	0	1	1.2V
0	1	0	1.5V
0	1	1	1.8V
1	0	0	2.5V
1	0	1	2.8V
1	1	0	3.0V
1	1	1	3.3V
For LDO			
CTRL5	CTRL4	N/A	OUT2
0	0	N/A	Disabled
0	1	N/A	1.8V
1	0	N/A	2.8V
1	1	N/A	3.0V

1. Connect the load terminals to:
 - a. Positive (+): VOUT
 - b. Negative (-): GND
2. Preset the power supply output between 2.0V and 5.5V, then turn the power supply off.
3. Connect the power supply output to:
 - a. Positive (+): VIN
 - b. Negative (-): GND
4. Turn the power supply on.
5. Turn the relative switchers (CTRL) on to test the voltage (see Table 1). The board should automatically start up.
6. If switching to a different output voltage, directly flip the tact switch.

Note:

- 2) If only using the LDO, VIN1 should exceed 2V.
