

PRODUCT CHANGE NOTIFICATION

Ref Nr: EBR-0176-20240311 Date: Mar 11, 2024

TO:	Customers who may concern	FROM:	Product Marketing, CPC	

HEREWITH YOU ARE INFORMED OF OUR INTENTION TO CHANGE THE PASSIVATION PROCESS OF TVS CHIP GLASS. $^{\rm i}$

DESCRIPTION:

To further advance our semiconductor product line, we are transitioning our TVS medium and high voltage (11V-220V) single-die products from the DB to the PG fabrication process. This strategic move primarily involves refining the glass passivation technique to enhance the overall performance of our products. The process focuses on optimizing the glass layer within the die groove, ensuring it does not interfere with the die separation process, while maintaining the electrical characteristics of the devices and ensuring there is no compromise on performance metrics.

Please be informed that this change will be phased in gradually. Starting from October 1st, shipments will include products manufactured using the PG process. The specific part numbers affected by this transition will be detailed in an accompanying attachment for your reference.

Enclosed is a comparative visual representation depicting the modifications pre and post-optimization. This elucidates the enhancements made and reaffirms our commitment to product excellence and reliability. We believe this proactive approach in communicating changes demonstrates our dedication to transparency and customer satisfaction.

TVS	Before change (DB)	After change (PG)	
schematic			

REASONS: Optimizing the glass structure within the die groove enhances product reliability.

EXPECTED INFLUENCE ON PERFORMANCE: Quality improved.

EXPECTED INFLUENCE ON QUALITY AND RELIABILITY: Quality improved.
