Prior to connection of aluminium conductors ensure that their contact points are cleaned, brushed and coated with grease. The contact terminals must be tighten up after six to eight weeks.

#### **Conditions of Delivery and Sale**

For business conducted in domestic and foreign markets the following conditions in their latest versions are valid:

General conditions of Supply and Delivery for products and services of the electrical industry: Form 2292 German, 2293 German-English, 2294 German-French. General conditions of Sale for the products and services of the electrical industry: Form 2327 German, 2381 English, 2326 French.

Relevant to specific orders special conditions can be agreed upon.

#### **Guarantee**

The guarantee period is 6 months, in favour of the endbuyer, and commences when the is in possession of the products. In this connection, our valid guarantee conditions are included in the packing of our cordless tools.

#### **Technical Reservations**

The data and figures of this publication are subject to change as required by technical progress.

## Miniature Circuit Breakers

### System pro M

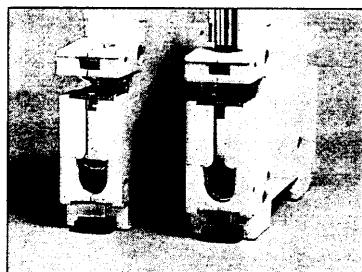

**These are the outstanding features for the S2 Generation.**

- All round protection against contact with live parts in accordance with DIN VDE 106 part 100.
- Delivered with open box terminals with captive screws and lower dualfunction terminal ready for busbar connection.
- Dualfunction terminals enables simultaneous connection of busbar and cable without additional connection pieces.
- Connection capacity for flexible multi- or single core conductors of 0,75 up to 25 mm<sup>2</sup> up to 40 A and 0,75 up to 35 mm<sup>2</sup> for 50 and 63 A. S 280 in general 0,75 up to 35 mm<sup>2</sup>.
- Cross wiring possible with solid round conductor up to 10 mm<sup>2</sup>.
- Positioning of the M.C.B. on the DIN-rail now possible before snapping on, as the mounting clip is on the lower side.
- Accessories can be fitted to the S2... range, on site by the user.
- High short-circuit switching capacity.
- Low let-through energy at the point of fault.
- Rated voltage single pole: 230/400 V AC  
multi pole: 400 V AC

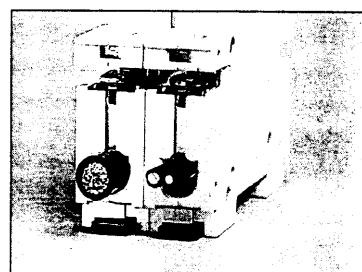

## Miniature Circuit Breakers

### System pro M

**The new terminal design has the following additional advantages:**

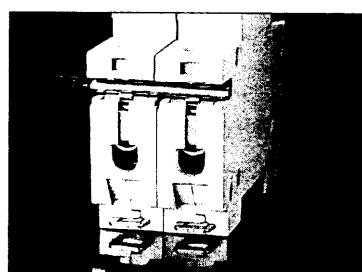

The new dualfunction terminal is delivered in open position for connection of busbars. When screw head is pressed the box terminal below opens fully.

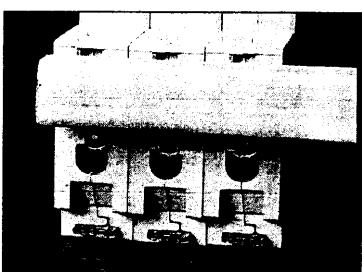

The terminals allow connection of conductors with 0.75 up to 25 mm<sup>2</sup>/35 mm<sup>2</sup> cross-section. Furthermore conductors of different cross-sections can be connected.

Up to 5 conductors with cross section 1.5 mm<sup>2</sup> each can be connected safely and reliably.

The lower terminal also allows cross-wiring by solid round conductor.

At the lower terminals cross-wiring can be made with comb-busbars up to a thickness of 4 mm or with 3-phase busbar blocks as shown above.

In addition, the incoming cable can be connected without accessories. Extra connection pieces are no longer necessary.

# Miniature Circuit Breakers

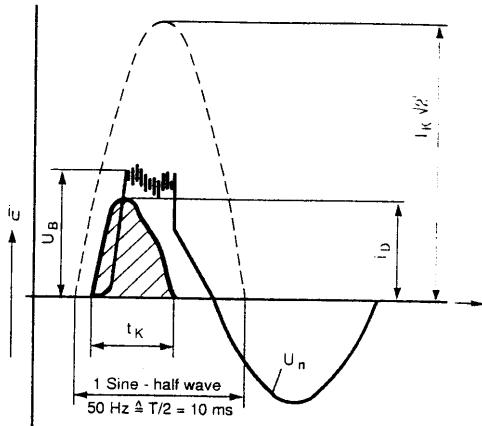

## System pro M

STOTZ M.C.B's of the System proM are equipped with the well proven STOTZ hammer head system and thus offer current limiting to the highest degree.

They offer

- high short-circuit switching capacity
- high selectivity to back up fuses
- in case of short-circuit, low stress on the cable in the point of fault due to the high limitation of the let-through  $f i^2 dt$  (current heating value).

Oscillogram of a rupturing process

SK 0102 Z 94

$I_k \cdot \sqrt{2}$  = peak value of the prospective short-circuit current

$i_b$  = max. let-through current of the M.C.B.

$U_n$  = mains voltage

$U_B$  = arc voltage of the M.C.B.

$t_k$  = breaking time of the M.C.B.

## Additional devices for example (more supplementary devices on page 31)

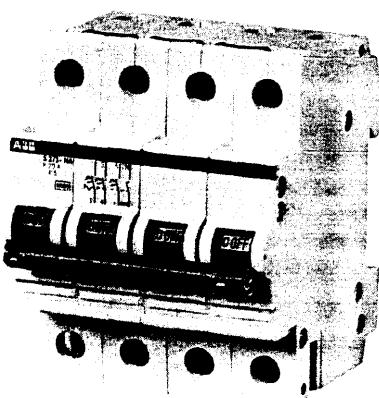

S 260, S 270, S 280

S 260, S 270, S 280

### Disconnecting neutral conductor NA

Unprotected pole (no trip mechanism) is force switched together with the M.C.B.

It can also be used as a normally open contact for signalling the contact position of the M.C.B.

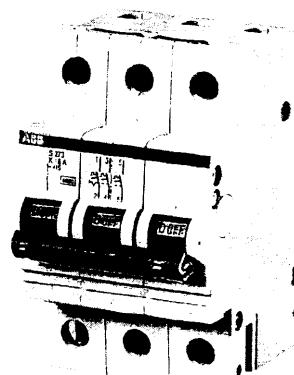

SK 0294 B 91

### Auxiliary contacts H ...

Contact position dependent on that of the M.C.B.  
The contacts are potential-free.

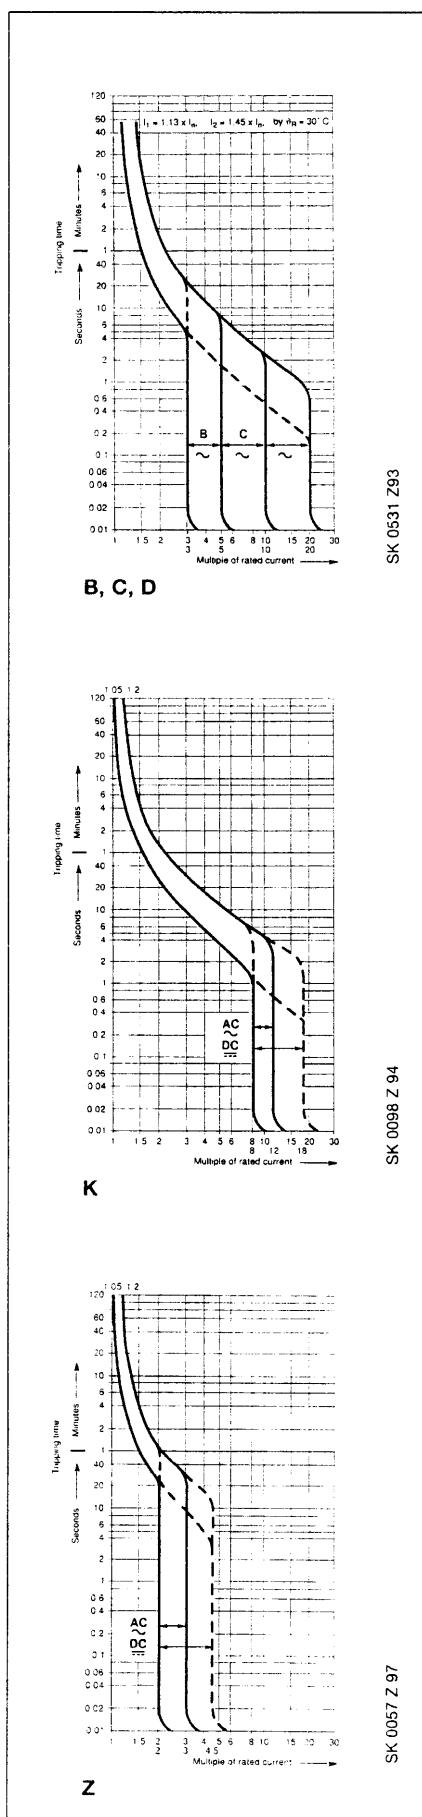

SK 0328 B 91

SK 0067 B 92

# Miniature Circuit Breakers

## System pro M

### General

#### Brief description

Current limiting M.C.B.'s with undelayed magnetic and delayed thermal trips, with fixed setting. Metal framed trip-free switching mechanism.

#### Task

Protection against overheating of electrical wires, cables and appliances in the case of overcurrent due to overload, short-circuit or earth fault in compliance with DIN VDE 0100 part 430.

Protection against dangerous body currents in the case of too high touch voltage due to insulation faults in compliance with DIN VDE 0100 part 410.

#### Application

For installation, switching, regulation and metering systems of building installations in commercial and industrial projects.

#### Accessories

The S2 ... range can be fitted subsequently with an auxiliary contact. The auxiliary contacts are suitable for switching auxiliary circuits as a function of the M.C.B.'s contact position; with 2 or 3 galvanically separated contacts. The auxiliary contacts are trip-free due to their coupling with the switching mechanism.

### Tripping characteristics and rated currents

#### B-, C- and D-Characteristic

The new characteristics acc. EN 60 898 are for line protection. They all have the same thermal settings and differ only in their magnetic tripping values.

The higher magnetic settings of the C- or D-characteristics are for applications with start or high inrush-currents.

#### K-Characteristic

For cable and appliance protection.

Rated currents 0.5 to 63 A in 17 steps (S 270) or 0.2 to 63 A in 20 steps (S 280). Motor protection can be achieved by the selection of the M.C.B. with the correct rated current corresponding to the motor data. The electro-magnetic trip is set in such a way that the motor starting current does not lead to tripping.

Due to the higher magnetic non tripping current, in circuits with incandescent lamp groups, mains parallel operated fluorescent lamps or other discharge lamps, the conductor cross-section to be protected can be more economically utilized as compared to a M.C.B. of the same rated current in tripping characteristic B.

#### Z-Characteristic

For protection of semiconductor devices and voltage transformer circuits.

## Miniature Circuit Breakers

## Technical data S 230

Specifications:	EN 60 898, DIN VDE 0641 part 11, IEC 898
No. of poles:	1, 2, 3
Tripping characteristics:	acc. to EN 60 898
Rated current $I_n$ :	6 ... 40 A
Rated voltage $U_n$ :	single pole: 230 / 400 V ~ multipole 400 V ~
Max. operating voltage $U_{B\max}$ :	$U_n + 10 \%$
Min. operating voltage $U_{B\min}$ :	12 V ~
Rated rupturing capacity acc. to IEC 898, EN 60 898:	see page 15
Selectivity class:	-
Short-circuit rupturing capacity:	see page 15
Frequency:	50 ... 60 Hz, other frequencies see page 14
Insulation acc. DIN VDE 0110 part 1 and 2	
- Overvoltage category:	IV
- Pollution degree:	2
- Surge voltage:	5 kV (1.2/50 µs)
- Surge voltage:	3 kV (50/60 Hz)
Housing:	Moulded plastic group I ( $CTI \geq 600$ ) to DIN IEC 112/VDE 303 part 1 RAL 7035
Switching lever:	Moulded plastic group II ( $400 \leq CTI < 600$ ) black, sealable
Degree of protection acc. to DIN VDE 40 050, IEC 529:	IP 20, when built in into distribution board: IP 40
Depth of unit:	68 mm
Dimensions:	acc. to DIN 43 880, size 1, see page 37
Mounting position:	optional
Mounting:	snap-on fixing on standard profile rails EN 50 022, 35 x 7.5 or screw fixing by means of mounting plate (see accessories)
Connection:	Combi box terminals on top and bottom, safe against unintentional touch acc. to DIN VDE 0106 part 100. Suitable for solid or flexible conductors from 0.75 to 25 mm <sup>2</sup> (till 40 A) and up to 35 mm <sup>2</sup> (for 50 A, 63 A) when no busbar is connected, and up to 16 mm <sup>2</sup> or 25 mm <sup>2</sup> (for 50 A, 63 A) when a max. 3 mm busbar is connected 2 Nm
Tightening torque:	
Mech. service life:	20 000 operations
Service life at rated load:	$I_n < 32 \text{ A}$ : 20 000 operations $I_n \geq 32 \text{ A}$ : 10 000 operations
Climate resistance acc. to DIN VDE 40 046 and IEC 68-2:	constant climatic conditions 23/83, 40/93, 55/20 [°C/RH] variable climatic conditions 25/95 – 40/93 [°C/RH]
Storage temperature:	$T_{\max} + 70 \text{ °C}$ , $T_{\min} - 40 \text{ °C}$
Ambient temperature:	$T_{\max} + 55 \text{ °C}$ , $T_{\min} - 25 \text{ °C}$
Shock resistance acc to DIN IEC 68-2-27 and DIN EN 60 068-2-27:	30 g minimum of 2 impacts duration of shock 13 ms
Vibration resistance acc. to DIN IEC 68-2-6:	5 g, 20 cycles 5 ... 150 ... 5 Hz at $0.8 \cdot I_n$
Weight:	see selection tables

acc. to IEC 947-2	K 0.2 up to 63 A	1.05 · $I_n$	1.2 · $I_n$	> 1h ③ < 1h	10 · $I_n$	14 · $I_n$	> 0.1 s < 0.1 s
acc. to IEC 947-2	Z 0.5 up to 63 A	1.05 · $I_n$	1.2 · $I_n$	> 1h ③ < 1h	2 · $I_n$	3 · $I_n$	> 0.1 s < 0.1 s

① Influence of ambient temperature see below. ② The tripping values for the electromagnetic trip are valid for AC 50 ... 60 Hz. For other frequencies see table below. ③ From warm operating condition (After  $I_1 > 1$  h)

### Influence of frequency on electromagnetic trips

The stated tripping values of the electromagnetic trips are valid for a frequency of 50 ... 60 Hz. In case of frequencies deviating from 50 ... 60 Hz as well as a direct current the tripping values are changed by the factor mentioned below.

	AC 100 Hz	200 Hz	400 Hz	DC
Factor approx.	1.1	1.2	1.5	1.5

The tripping values of the thermal trips are independent of the frequency.

### Influence of ambient temperature

The thermal trips are calibrated for an ambient temperature of 20°C for K and Z ; 30°C for B, C, D characteristic

In the case of temperatures deviating from these values the tripping values

- are reduced in case of higher temperatures
- are increased in case of lower temperatures (see page 27).

The electromagnetic tripping is not dependent on temperature.

① In symmetrical earth-ground AC networks 2 pole MCB's (two poles in series) are applicable up to 110 V ... In this case the rated rupturing capacity is one step higher than the 1 pole version. Direction of connection is optional.

② The max. back-up protection is only required if the prospective short circuit current may exceed the short circuit rupturing capacity of the MCB.

③ K from 0.2 A, Z from 0.5 A rated current.

### Short circuit rupturing capacity

Switching sequence according to DIN VDE 0660 Part 101, IEC 947

For the short circuit rupturing capacities listed the time constant  $T = L/R \leq 15$  ms is valid in the case of DC.

In the case of AC for 10 kA;  $\cos \phi \geq 0.6$  – for 8 and 6 kA:  $\cos \phi \geq 0.7$  – for 4, 5 and 3 kA:  $\cos \phi \geq 0.8$  and for 2 kA:  $\cos \phi \geq 0.9$ .

### Selectivity in case of overload

The miniature circuit breaker is selective to the back-up fuse in the overcurrent range. For short-circuit selectivity see page 23/25.

Determination of the smallest selective back-up device (main circuit breaker or fuse) to a STOTZ M.C.B.

Smallest rated current of back-up device = rated current of M.C.B.  $\times$  selective factor

### Selective factors (overload)

M.C.B.			
Characteristic/ S 240/S 260/S 270/S 280 rated current	main circuit breaker S 700		Fuse

In those cases where the measured impedances exceed these values an earth fault protection device in acc. with VDE 0664 should be provided as a rupturing device in TN or TT networks.

e.g. STOTZ Residual Current Circuit-Breakers F 372 and F 374 or RCBO multiSTOTZ F 270/6.

①  $U_0$  = rated voltage to earthed conductors: for  $U_0 = 240 \text{ V } \sim Z_s \cdot 1.04$  applies;

for  $U_0 = 127 \text{ V } \sim Z_s \cdot 0.55$  applies  $ZS = R_{M.C.B.} + R_{loop}$

The fault loop impedance can be measured with commercially available instruments such as e.g. ABB-

### Internal resistances and power losses of the MCB s

Internal resistances per pole in  $m\Omega$

Power losses per pole in W

S 290	C

## System pro M

### Examples for application

#### Reduction of making current peaks

The making time of a contactor type B 9 is 9 ... 17 ms. If this time is not sufficient, a delay-on energisation timer (0.1 ... 40 s) may be snapped onto the contactor without problems.

The resistor  $R_x$  has to be selected according to the requirements (see determination of  $R_x$ ).

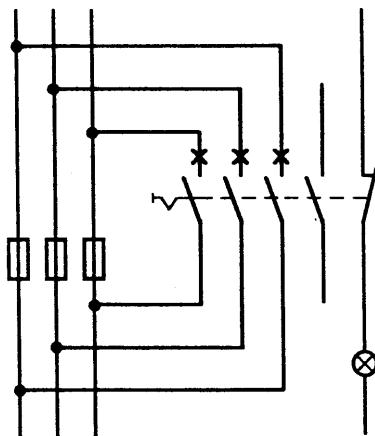

SK 0112 Z 94

#### Monitoring of fuses

The M.C.B. S 270-K 0.5 is especially suitable for the monitoring of fuses, since, due to its high internal resistance it has an unlimited switching capacity.

In case of planned switching, e.g. withdrawal of the fuse cartridges or opening of the disconnector it must be ensured that the M.C.B. also is switched off.

SK 0209 Z 95

#### Determination of $R_x$ :

$$R_x > \frac{1.1 U_n}{I_H}$$

$U_n$  = Mains voltage

$I_H$  = electromagn. non tripping current of S 271-K ( $8 \times I_n$ ) see table on page 14

### Protection of lamps

#### 1. Thungsten lamps and fluorescent tubes

In the following table is indicated the maximum allowed number of fluorescent lamps, which can be protected with a single pole M.C.B. For unit multi pole M.C.B.'s this number is reduced by 20%.

Miniature circuit breakers with K and C characteristic, can carry their rated current  $I_n$  when protecting:

Tungsten lamps

- Fluorescent lamps a) non compensated
- b) parallel compensated
- c) electronic ballast

#### 2. High pressure lamps

Starting load: appr.  $1.7 \times$  nominal current of lamp.

Recovery time: 3 ... 5 min. Dependent on lamps type, cable impedance and starting moment a rectifier effect can overlay the starting current of lamps for some half waves.

In the worst case starting currents of approx.  $15 \times$  rated current of lamp may occur. To prevent nuisance tripping, M.C.B.'s with K characteristics may only be loaded with 0.6 times rated current of lamps.

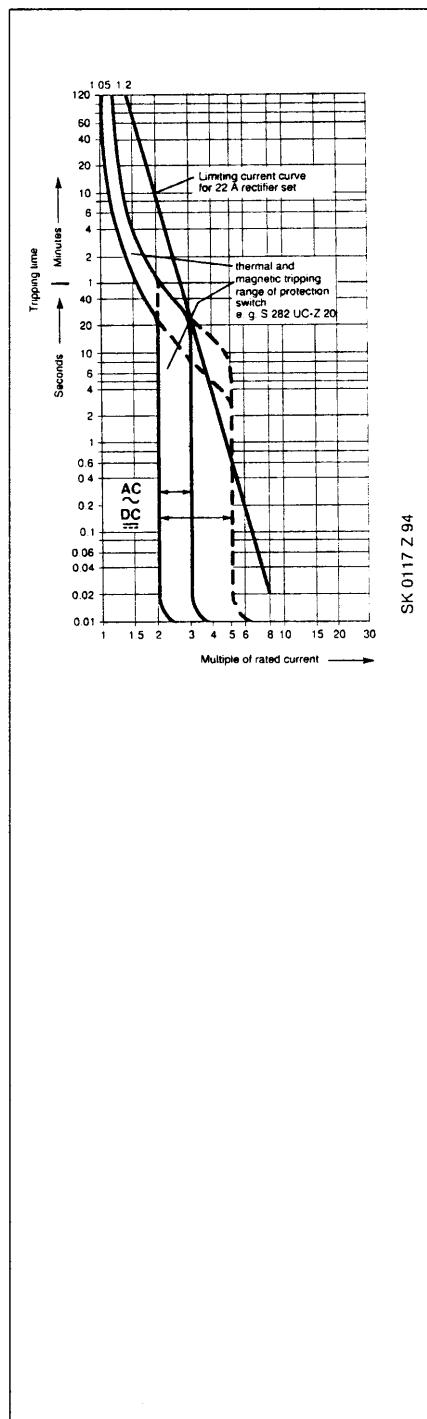

The indicated load factor refers to the worst case of application (position near trafo, low cable impedances).

**Example, connection of a protection switch to a silicon rectifier set  
(see characteristic curve)**

22 A rectifier set in full wave connection with 4 silicon cells 11 A.

Type of M.C.B. selected - S 282 UC-Z - 20 A.

The fact that both characteristic curves run side by side shows that the coordination conditions are still being fulfilled. If this were not the case, it would be necessary to substitute the next lower current rating S 282 UC-Z 16.

If short circuit currents higher than the surge current limiting values for 10 ms given in the manufacturer's documentation of the device are expected, the let through  $fI^2dt$  of the protection switch must be less than the limiting load  $fI^2dt$  of the device.

# High rupturing capacity M.C.B.'s S 280 UC Range

The M.C.B.'s type S 280 UC can be used up to 220 V ... for single pole M.C.B.'s or up to 440 V ... for 2 pole or for 4 pole M.C.B.'s with series connection of 2 poles.

The S 280 UC version differs from the standard S 280 M.C.B. in that it is fitted with a permanent magnet which assists in the forced extinguishing of the arc. It is therefore important that care is taken to observe the correct polarity and current flow direction when connecting these M.C.B.'s.

If voltages of over 220 V ... to earth are to be switched then for single pole switching a 2 pole M.C.B. S 280 UC and for all pole switching a 4 pole M.C.B. S 280 should be used.

## **Example for max. permissible voltages between leads in relation to the number of poles and switching:**

max. voltage between the leads	220 V ...	440 V ...	440 V ...	440 V ...	440 V ... (voltage reversal)
max. voltage between leads and earth	220 V ...	220 V ...	440 V ...	220 V ...	220 V ...
M.C.B.	1 pole S 281 UC	2 pole S 282 UC	2 pole S 282 UC	2 pole S 282 UC	4 pole S 284 UC
Supply-input below					
Supply-input above					

① Negative pole connected to earth

② Positive pole connected to earth

SK 0114 Z 94

SK 0115 Z 94

## **Examples for various high voltages between a connecting lead and earth with equal voltages between the leads:**

max. voltage between the leads	440 V ... All pole switching	440 V ... All pole switching	440 V ... All pole switching
max. voltage between the leads and earth	220 V supply symmetrically earthed	440 V Mains unearthing or unsymmetrically earthed	440 V Mains unearthing or unsymmetrically earthed

## System pro M

### Add-on possibilities of supplementary devices to M.C.B.'s (Examples)

<p>to be fitted direct on to the M.C.B.</p>  <p>SK 0151 Z 94</p> <p>Auxiliary contact H.. or combined signal contact/auxiliary contact S/H or signal contacts</p>	 <p>SK 0152 Z 94</p> <p>Shunt trip A or undervoltage release UA</p>	 <p>SK 0169 Z 96</p> <p>Shunt trip or undervoltage release and auxiliary contact or combined signal contact/aux. contact or signal contact</p>	 <p>SK 0154 Z 94</p> <p>Hand operated neutral</p>
--	--	--	--

### Supplementary devices for subsequent mounting

#### Auxiliary contact S 2 - H...

The auxiliary contact can be built on subsequently to the M.C.B.

The switching position of the auxiliary contact depends on the position of the M.C.B. (ON-OFF). Because of coupling to the switching mechanism of the M.C.B. the auxiliary contact offers a trip free feature.

The auxiliary contact can be delivered either with screw- or plug in connections, the auxiliary contact with 3 potential free contacts only in screw-in connection.

#### Signal contact S 2 - S

It signals the tripping caused by overload earth fault or short circuit current however there is no signal when the M.C.B. is switched OFF manually. With a red handle which allows resetting of the trip signal without the M.C.B. being switched on. It has also a test button for checking the control circuit without interrupting the main circuit.

#### Undervoltage release S 2 - UA ..

For remote tripping of the M.C.B. Only in case of substained voltage the relay allows to switch on the M.C.B. The undervoltage release trips the M.C.B. if the supply voltage is interrupted or switched off (suitable for emergency off circuits).

#### Shunt trip S 2 - A .

For remote tripping of the M.C.B. by applying a control voltage. The shunt trip contains a relay with an integrated contact, that opens after the M.C.B. has tripped and interrupts the control voltage of the relays, this prevents the flow of current in case of substained control voltage.

### Supplementary devices for separate mounting

#### Hand operated neutral

The hand operated neutral has to be mounted to the right hand side of the M.C.B. and be snapped on to the DIN rail. It is used for measuring duties where the neutral conductor must be in the open position. Due to the special design of the handle – when switching ON the M.C.B. – the neutral will make before the M.C.B. is closed.

# Miniature Circuit Breaker

## Supplementary devices

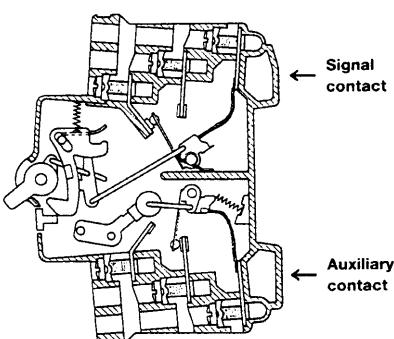

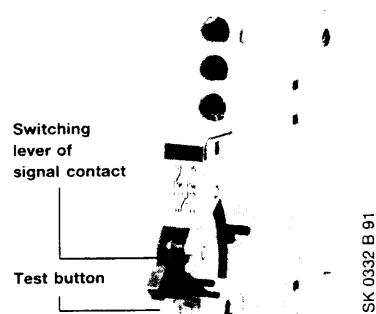

### Supplementary devices for subsequent mounting

#### Combined signal contact/auxiliary contact S/H

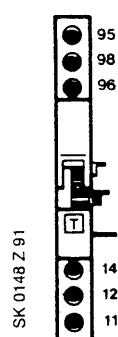

The combined signal contact/auxiliary contact can easily be built-on subsequently to M.C.B.'s of the range S 260/S 270/S 280.

The signal unit and the auxiliary unit have a potential free changeover contact.

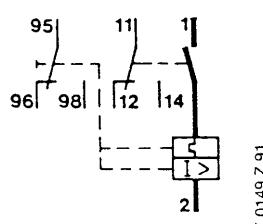

The contacts are trip free.

Arrangement of function

Terminal arrangement

Switching diagram

#### The signal contact

- signals the tripping caused by overload earth fault or short circuit current however there is no signal when the M.C.B. is switched OFF manually.
- has a red handle which allows resetting of the trip signal without the M.C.B. being switched on.
- has a test button for checking the control circuit without interrupturing the main circuit.

#### The auxiliary contact

- signals a trip caused by overload, earth fault and short circuit current as well as the manual switching OFF of the M.C.B.

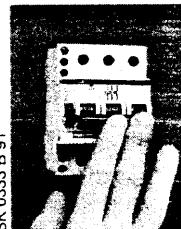

#### Applications

- for insulation measuring when the M.C.B. is switched OFF, in this case only the auxiliary contact switches, however, the signal contact remains in its position.
- for testing purposes of the control circuit. The signal contact is switched OFF by pressing the test button "T" and can be reset by operating the red toggle, the main circuit will not be interrupted.
- the signal contact can be reset in order to switch OFF an accustic signal, without switching the M.C.B.

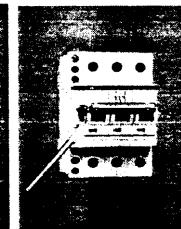

The multipurpose function of the combined signal contact/auxiliary contact S2-H is excellent.

Testing the main circuit without signalling

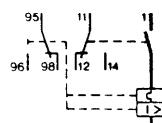

Testing the signal circuit without service interruption

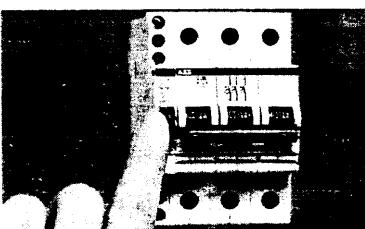

Manual operation

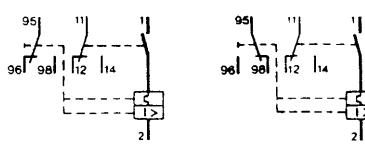

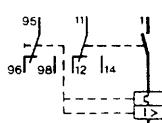

Pressing Test "T"

After short circuit or overload, resetting of the signal

Press red signal contact handle to the top position

### Auxiliary contacts, signal contact or combined signal contact/auxiliary contact

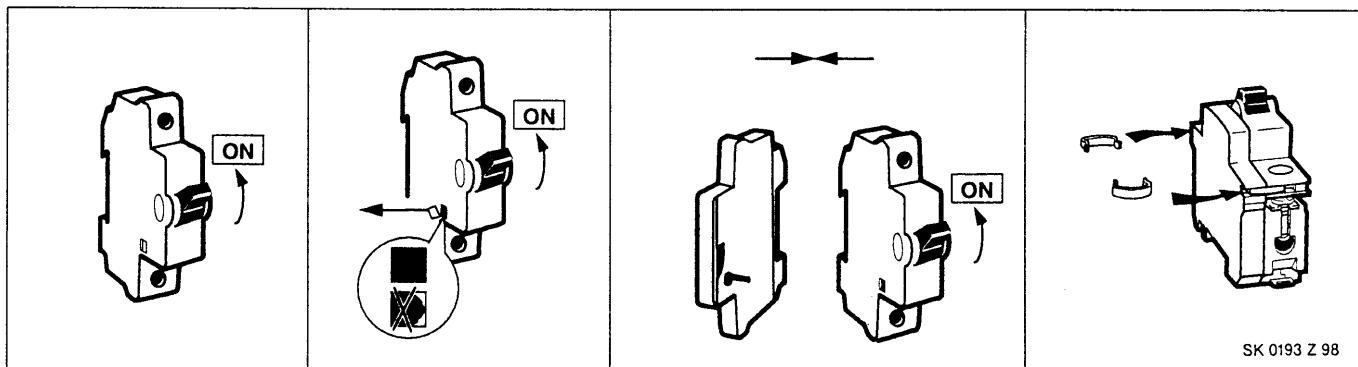

The M.C.B.'s S 260/S 270/S 280 range can subsequently be fitted with an auxiliary contact, signal contact or combined signal contact/auxiliary contact.

Ordering details see selection table.

The auxiliary contact blocks are supplied with the contact arrangement 1 NO + 1 NC, 2 NO or 2 NC.

The combined signal contact/auxiliary contact have each a potential free changeover contact.

#### Fitting of auxiliary contact

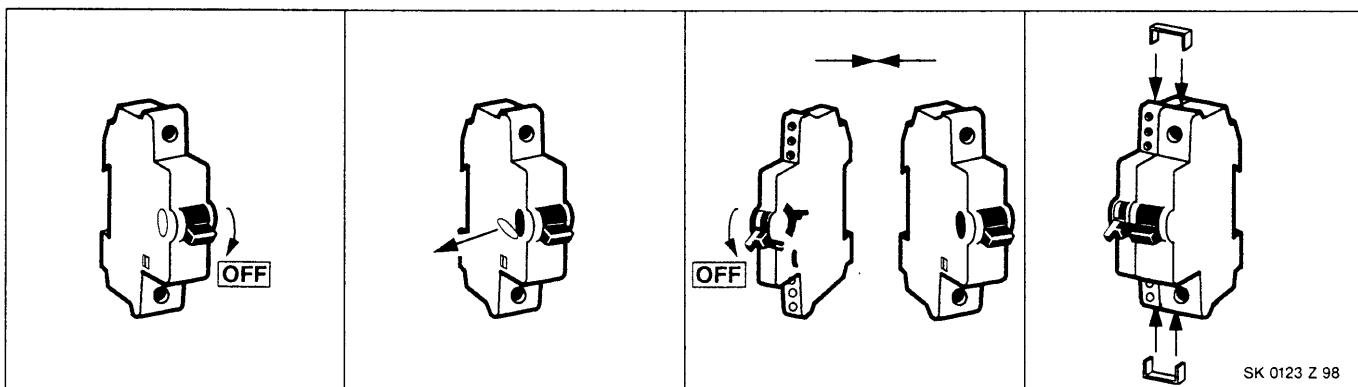

Bring the M.C.B.'s handle to the ON position.

Break out the opening at the M.C.B.

Place the auxiliary contact to the M.C.B. ...

... and fix it with spring clamps

#### Fitting of signal contact

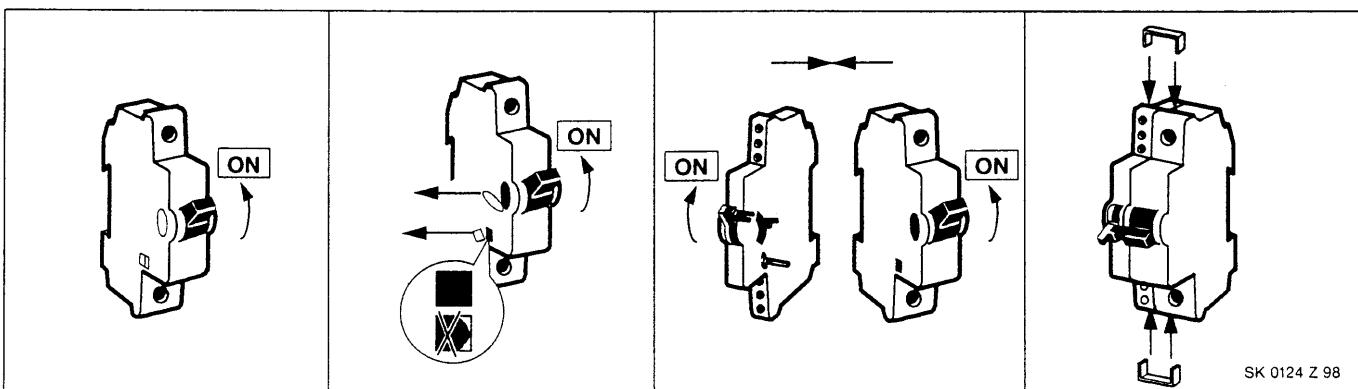

Bring the M.C.B.'s handle to the OFF position.

Remove the cover at the M.C.B.

Bring the signal contact's handle to the OFF position, place the signal contact to the M.C.B. ...

... and fix it with spring clamps

#### Fitting of combined signal contact/auxiliary contact

Bring the M.C.B.'s handle to the ON position.

Remove the cover and break out the opening at the M.C.B.

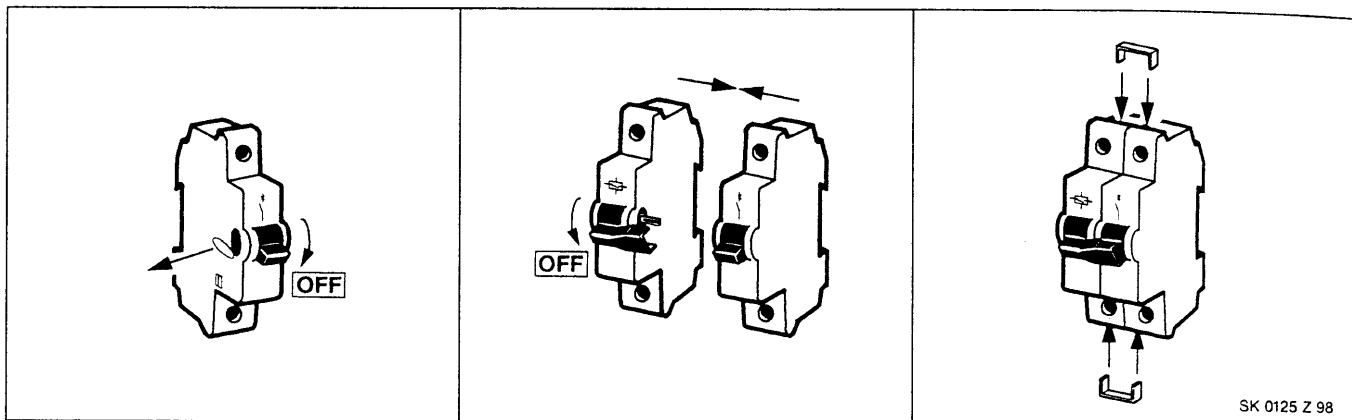

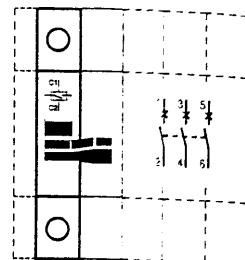

Bring the handles to the ON position, ... and fix it with spring clamps place the signal contact/auxiliary contact to the M.C.B. ...

**Shunt trip**

The M.C.B.'s S 260, S 270 and S 280 range can be subsequently be fitted with a shunt trip.

Mounting always to the left hand side of the M.C.B.

If auxiliary contacts or the combined signal contact/auxiliary contact are to be fitted these must be fitted on left hand side of the shunt trip.

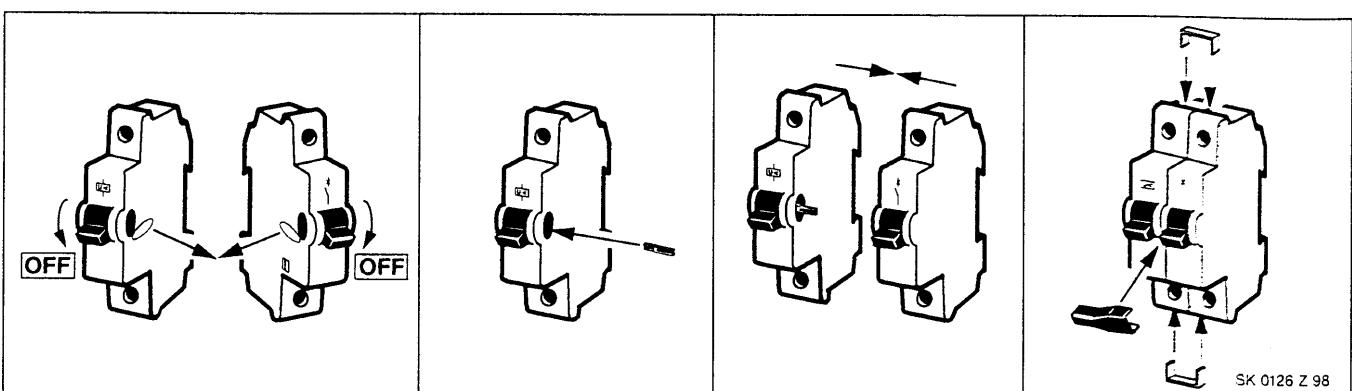

Bring the M.C.B.'s handle to the OFF position and remove the cover at the M.C.B. ...

Bring the shunt trip's handle in the OFF position, place the shunt trip to the M.C.B. ...

... and fix it with spring clamps

The possible fitting of an auxiliary contact or combined signal contact/auxiliary contact is described on page 32.

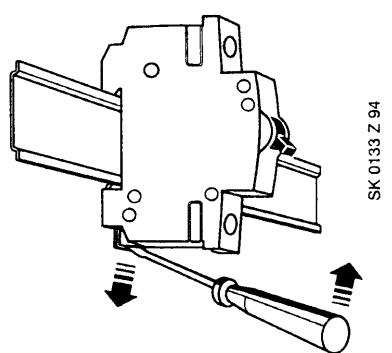

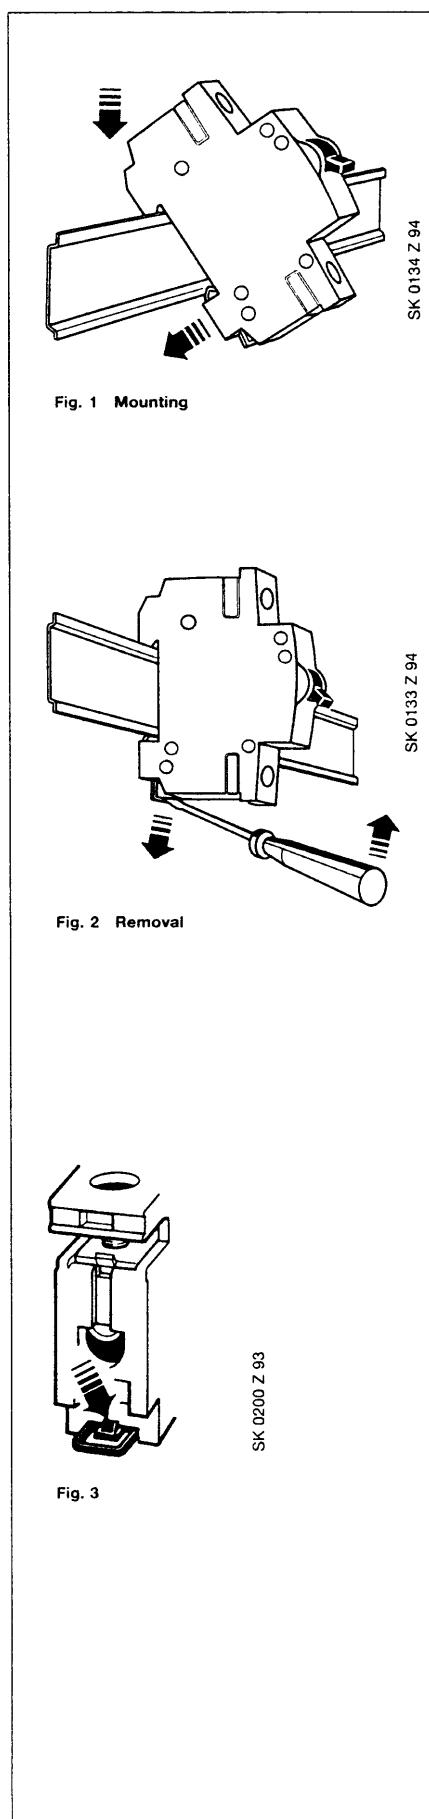

**Under voltage release****Fitting of undervoltage release**

Bring the undervoltage relais and M.C.B.'s handle in OFF position and remove the covers.

Fit the connection lever in the housing of the M.C.B. ...

Place the undervoltage release to the M.C.B. ...

... fix it with spring clamps and install the switch lever.

**Technical Data** see page 8/10**Mounting**

Arbitrary mounting position using snap-on fixing to standard mounting rail EN 50 022 35 x 7.5 mm. The slide bolt located on the bottom side of the M.C.B. engaged in the external position. The engagement is triggered off by pressure on the middle part of the slide bolt only S 280 (see Fig. 3).

Separate mounting by means of:

Mounting rail with 2 screw fixing holes.

Mounting kit with terminal covers.

Mounting kit for flange mounting with special terminals for rear connection.

**Connection**

Cable cross section see page 8/10

When connecting cables it must be ensured that the cable is rigidly fixed and is not likely to be moved by other components or is subject to excessive vibration.

Max. tightening torque 2 Nm for main terminals, and 0.5 Nm for auxiliary terminals.

**Operation**

The M.C.B.'s are switched on by operation of the switch toggle to the upper position i.e. towards the type label in the position "I" ON is visible on the switch toggle. At the S 280 the contact position indicator turns from red to green.

If the M.C.B. can be reclosed soon after a trip it can be assumed that the reason for tripping was an overload. If the M.C.B. trips instantly again when reclosed after a trip, wait for a while and try again. A repeated instant trip indicates a short-circuit or earthfault in the circuit. No attempt should be made to continually reclose on to an existing short-circuit or earth fault. The M.C.B.'s are fitted with a trip free mechanism i.e. they even trip under fault conditions also when the switch handle is held to the "I" (ON) position by force.

**Cleaning**

M.C.B.'s which may have become soiled during assembly work in the switchboard can be cleaned with a damp and soapy cloth. On no account corrosive or similar solvents should be used.

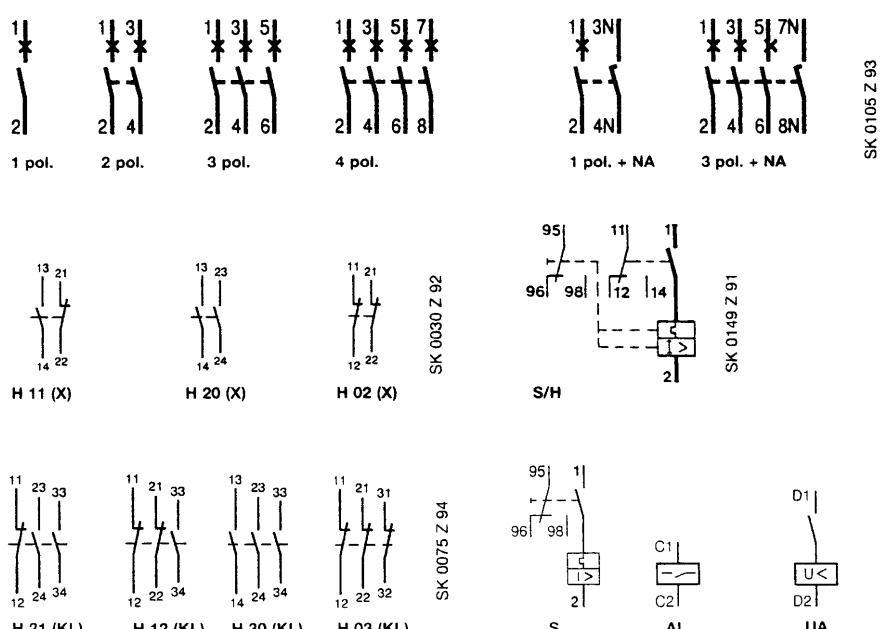

**Maintenance**

STOTZ M.C.B.'s are maintenance free.

In case of opening the M.C.B. the right to claim under guarantee expires.

**Connection diagrams**

Input optional from top or bottom. Terminal markings acc. EN 50 005.

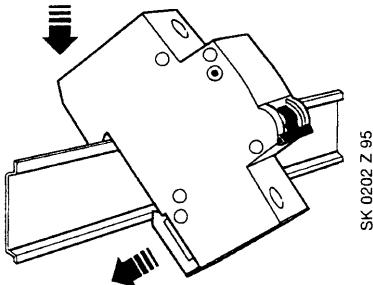

Fig. 1 Mounting

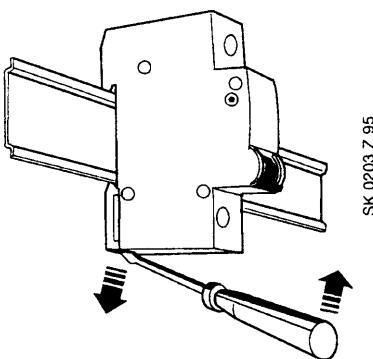

Fig. 2 Removal

**Technical Data** see page 11**Mounting**

Arbitrary mounting position using snap-on fixing to standard mounting rail EN 50 022 35 x 7.5 mm.

**Connection**

When connecting cables it must be ensured that the cable is rigidly fixed and is not likely to be moved by other components or is subject to excessive vibration.  
Max. tightening torque 4.5 Nm for main terminals, and 0.5 Nm for auxiliary terminals.

**Operation**

The M.C.B.'s are switched on by operation of the switch toggle to the upper position i.e. towards the type label in the position "I". The contact position indicator turns from red to green. If the M.C.B. can be reclosed soon after a trip it can be assumed that the reason for tripping was an overload. ### Technical Data

Busbar material:	SF-Cu
Insulation material:	Plastic, temperature resistant $\geq 90^\circ\text{C}$ non inflammable, self extinguishing
Cross sections of busbars:	10, 12, 16, 20, 24 and 36 mm <sup>2</sup>
Rated voltage:	440 V
Insulation voltage:	> 3 kV
Max. short.circuit capacity:	25 kA
Climatic resistance:	acc. to DIN 40 046 resp. IEC 68-2  Constant climate: 23/83; 40/93; 55/20 Changing climate: 25/85; 40/93 [°C/RH]
Standards:	DIN VDE 0606 (wiring material) DIN VDE 0606 part 504 (consumer units)
Max. busbar current I <sub>s</sub> /Phase depending on cross section of busbar:	10 mm <sup>2</sup> : 50 A 12 mm <sup>2</sup> : 55 A 16 mm <sup>2</sup> : 65 A } per branch 20 mm <sup>2</sup> : 75 A 24 mm <sup>2</sup> : 85 A 36 mm <sup>2</sup> : 110 A }

### Maximum load depending on supply connection point

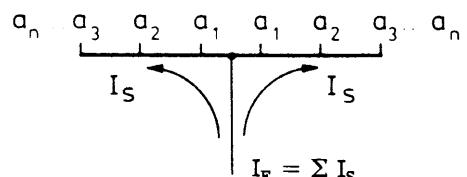

Cross section of busbar	mm <sup>2</sup>	Comb-busbars						Busbar blocks					
		10	12	16	20	24	36	10	12	16	20	24	36
① max. supply current I <sub>s</sub> / Phase	A	50	55	-	75	85	110	50	-	65	-	-	-
Connection cross section	mm <sup>2</sup>	10	16	-	25	25	35	10	-	16	-	-	-
② max. supply current I <sub>s</sub> / Phase	A	100	110	-	150 <sup>1)</sup>	170 <sup>1)</sup>	220 <sup>1)</sup>	110	-	130 <sup>1)</sup>	-	-	-
Connection cross section	mm <sup>2</sup>	25	35	-	2 x 25	2 x 25	2 x 35	25	-	35	-	-	-

① Supply connection  
at the end of the  
busbar

SK 0062 Z 91

② Supply connection  
along the busbar or  
at the centre

SK 0063 Z 91

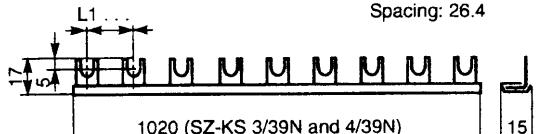

<sup>1)</sup> If supply connection is at the centre via the M.C.B.-terminals, care has to be taken that the max. current for each supply point does not exceed the values as stated by the manufacturers. For example: for STOTZ-M.C.B.'s of ranges S 240, S 260 and S 270: max. 110 A, for M.C.B.'s S 280 range: max. 140 A.

Further care has to be taken that the sum of each branch currents a<sub>1</sub> ... a<sub>n</sub> does not exceed the max. busbar load I<sub>s</sub> / Phase, mentioned in above table.

① Suitable for continuous flow water heater 12 kW

② Suitable for continuous flow water heater 18 kW

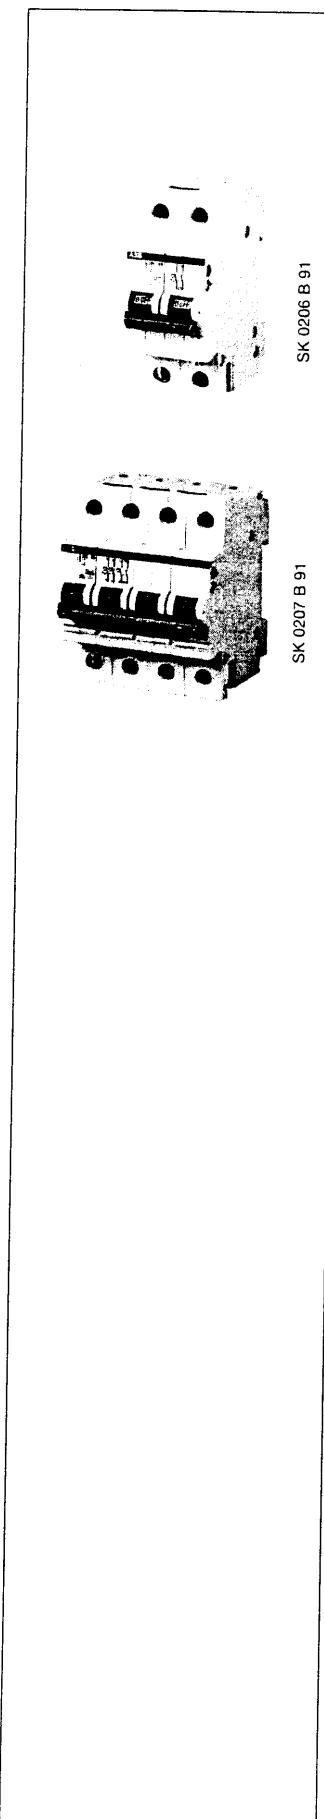

③ Suitable for continuous flow water heater 21, 24 and 27 kW

④ U<sub>Bmax</sub> 125 V ... with 2 poles connected in series

⑤ Large pack B 16 = 5000 pieces

\* only suitable for addition of auxiliary contacts S2-H... or S2-H...X

\*\* suitable for addition of all supplementary add on devices

### Locking device for M.C.B.'s

For prevention of single- or multi-pole M.C.B.'s against dangerous switching on or unauthorized switching-off. For padlock with hasp diameter max. 4 mm and lock width max. 17 mm.

### Application

Locking against switching ON:

- Locking against undesired switching ON during maintenance work
- Locking with commissioning notice
- Locking when supply is being blocked

Locking against switching OFF:

- Prevention of unwanted manual switching OFF, e.g. of Alarm, air conditioning, computer installations etc.
- Reclosing after tripping only allowed by authorised persons

ABB STOTZ-KONTAKT develops, manufactures and distributes most modern systems for the electrical building installation.

Moreover STOTZ products are produced and distributed in many other countries of the world through associated companies and licensees.

Under the STOTZ quality mark the company offers complete building installation systems:

## System pro M

### For Universal Use

The universal, modular System pro M for DIN rail installation includes a complete range of built-in devices for protection, switching, control and monitoring functions alongside Europe's best-selling miniature circuit breakers, not to mention time-saving wiring and installation tools.

## EIB- Installation Systems

### Intelligent Installation Systems

Modern programmable installation systems using bus technology based on the European EIB-Standards.

### ABB i-bus® EIB

The system using a dedicated 2-core bus cable: the preference for new buildings.

### ABB Powernet EIB

The system for building modernisation. Information transfer takes place over the existing power network.

## Security Systems

### For all-round protection

A complete program of security systems and components:

- Wireless alarm systems
- Intruder and fire alarm systems
- Door closure equipment
- Signalling components
