Features

- **Industry Standard Size**
- **Industry Standard Pinout**
7.62 mm (0.300 inch) DIP Leads on 2.54 mm (0.100 inch) Centers
- **Choice of Colors**
AlGaAs Red, High Efficiency Red, Yellow, Green
- **Excellent Appearance**
Evenly Lighted Segments
± 50° Viewing Angle
Optimum Contrast Given by
Gray Top Surface for AlGaAs Red and Green Devices
Red Top Surface for HER Devices
Yellow Top Surface for Yellow Devices
- **Design Flexibility**
Common Anode or
Common Cathode
Single Digits
- **Categorized for Luminous Intensity**
Yellow and Green Categorized for Color
Use of Like Categories Yields a Uniform Display
- **High Light Output**
- **High Peak Current**
- **Excellent for Long Digit String Multiplexing**
- **Intensity and Color Selection Available**

Description

The 7.6 mm (0.3 inch) and 10.9 mm (0.43 inch) LED seven segment displays are designed for viewing distances up to 3 metres (10 feet) and 5 metres (16 feet). These devices use an industry standard size package and pinouts. All devices are available as either common anode or common cathode.

Notes:

1. These displays are recommended for high ambient light operation. Please refer to the HDSP-E10X AlGaAs and HDSP-335X HER data sheet for low current operation.
2. Universal pinout brings the anode and cathode of each segment's LED out to separate pins. See internal diagram D.
3. Universal pinout brings the anode and cathode of each segment's LED out to separate pins. See internal diagram H.

Notes:

1. For codes not listed in the figure above, please refer to the respective datasheet or contact your nearest Agilent representative for details.
2. Bin options refer to shippable bins for a part number. Color and Intensity Bins are typically restricted to 1 bin per tube (exceptions may apply). Please refer to respective datasheet for specific bin limit information.

These displays are ideal for most applications. Pin for pin equivalent displays are also available in a low current or high light ambient design. The low current

displays are ideal for portable applications. The high light ambient displays are ideal for high light ambients or long string lengths. For additional informa-

tion see the Low Current Seven Segment Displays, or High Light Ambient Seven Segment Displays data sheets.

Notes:

- Device case temperature is 25°C prior to the intensity measurement.
- The digits are categorized for luminous intensity. The intensity category is designated by a letter on the side of the package.
- The dominant wavelength, λ_d , is derived from the CIE chromaticity diagram and is that single wavelength which defines the color of the device.
- Typical specification for reference only. Do not exceed absolute maximum ratings.
- For low current operation, the AlGaAs HDSP-E10X series displays are recommended. They are tested at 1 mA dc/segment and are pin compatible with the HDSP-E15X series.
- For low current operation, the HER HDSP-335X series displays are recommended. They are tested at 2 mA dc/segment and are pin compatible with the 5082-7650 series.
- The Yellow (5082-7620/7660) and Green (HDSP-3600/4600) displays are categorized for dominant wavelength. The category is designated by a number adjacent to the luminous intensity category letter.
