## TITANIUM TWEEZERS (Swiss Made)

Titanium Grade 1 (unalloyed titanium) engineering materials with extraordinary combination of properties, relatively low density ( $4.5\text{g/cm}^3$ ) good mechanical properties and a very high melting point that allows the use at high temperatures ( $870^\circ\text{C}$ ) good corrosion resistance at room temperature to air, marine and a variety of industrial environments such as chlorine solutions generally it is used when in addition to the corrosion resistance, high strength-to-weight ratio is required
