CONSTRUCTION

The resistors are constructed out of a high-grade ceramic body. Internal metal electrodes are added at each end and connected by a resistive paste. The composition of the paste is adjusted to give the approximate required resistance. The resistive layer is covered with a protective coat. Finally, the two external terminations are added. See fig.3

Note:

1. All our RSMD products are 100% Lead free / RoHS compliant. On our 2D reel label the internal CTC (without L) will be mentioned with additional print "LFP" for : Lead Free Process.

2. On customized label, "LFP" or specific symbol printed and the optional "L" at the end of CTC / 12NC can be added (both are on customer request)

3. Products with lead free terminations meet RoHS requirements.
(Non of the forbidden materials are used in products / production)

The Pb-glass contained in electrodes , resistor element and glass is exempted by RoHS.

* : Standard power for 7" reel is 1 Watt.
